Parent

A parent or guardian finds a dojo, creates a family account and signs their children up for sessions. Parents don't need approval or a background check: they only ever manage their own children.

Screenshots taken on the development site (seeded demo data) as **guardian-5 (seeded parent of Lotte, 14, and Olivia, 16)**, 29 September 2026.

The journey

- Discover dojos and sessions without an account
- Create a family account with the children in one go
- Follow each child's belts, badges and history
- Sign up for a session, and get the confirmation mail
- Manage mail, sign-in security and privacy

Steps in this document

1. Discover CoderDojo
2. Find a dojo nearby
3. A dojo's page
4. Browse sessions
5. A full session
6. Create a family account
7. The family's account page
8. A child's page
9. Pick a session
10. Choose which children go
11. Confirm
12. Signed up
13. The confirmation mail
14. Mail preferences
15. Sign-in security
16. Privacy: export or delete

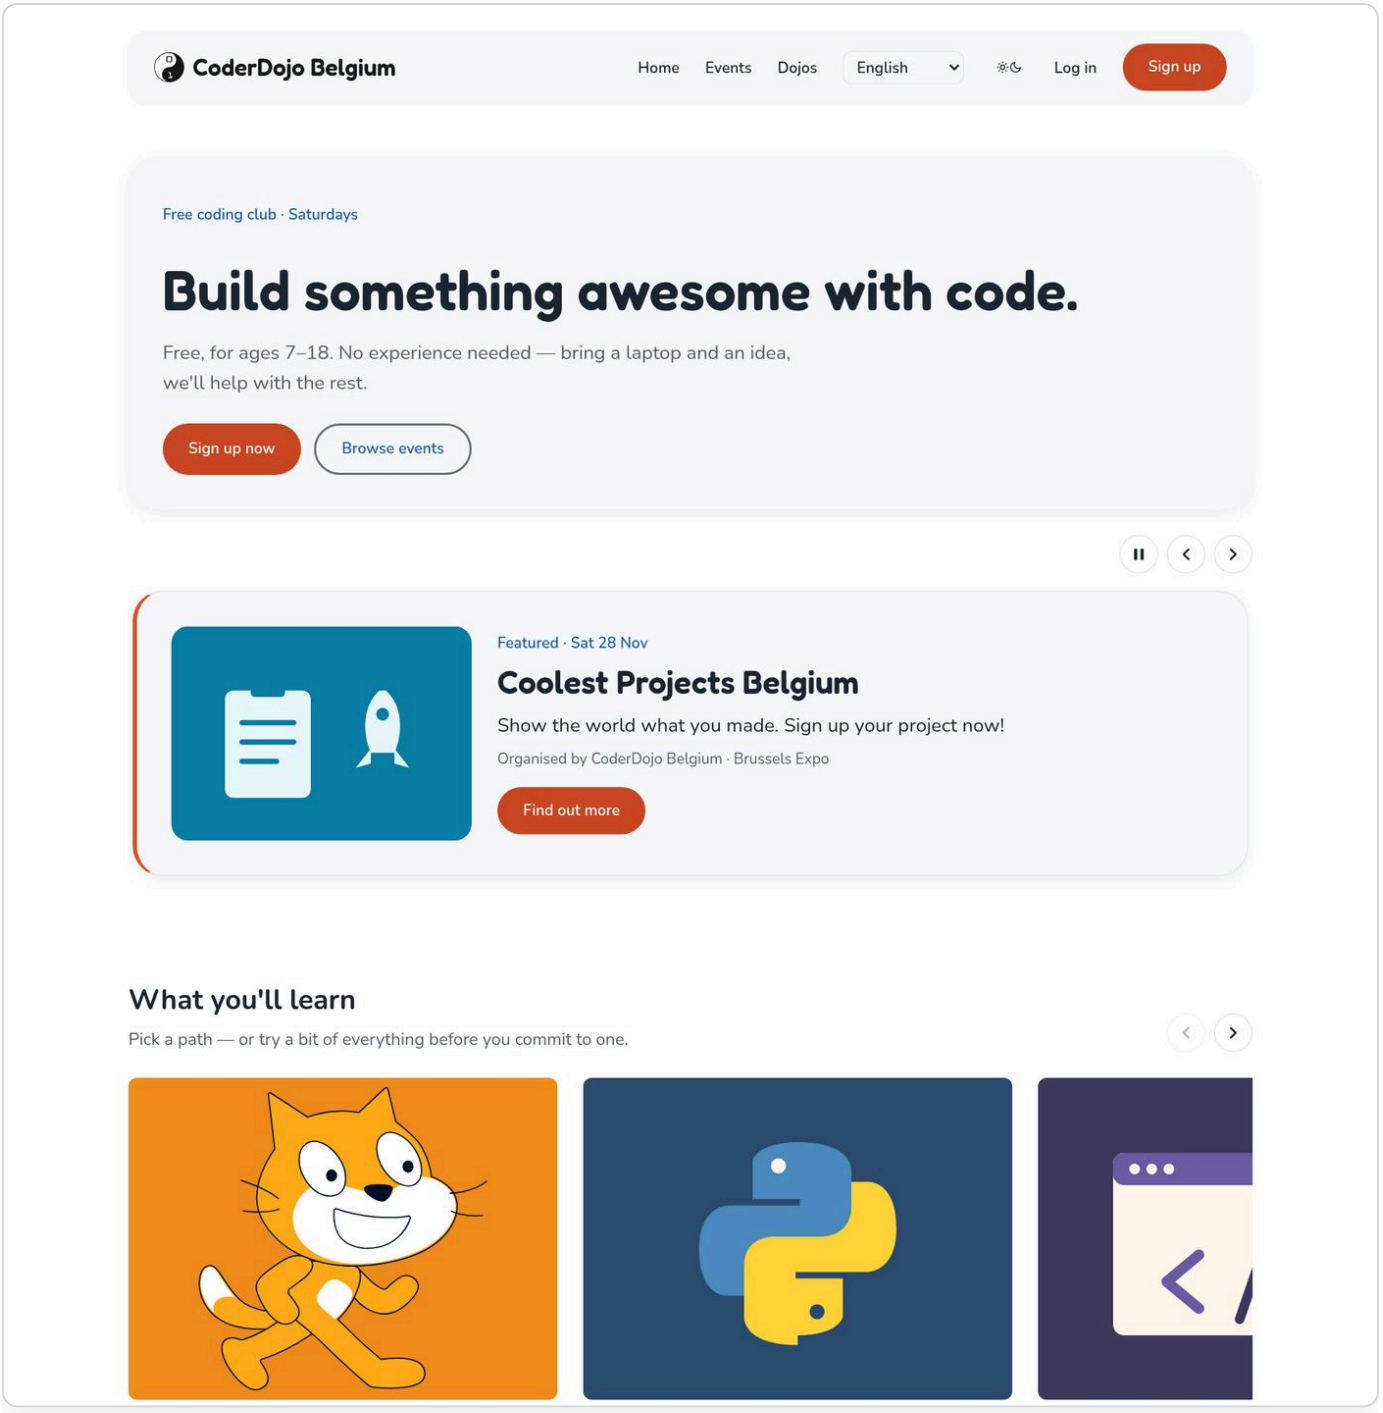

coolregistration.localhost · generated from the running application

Step 1

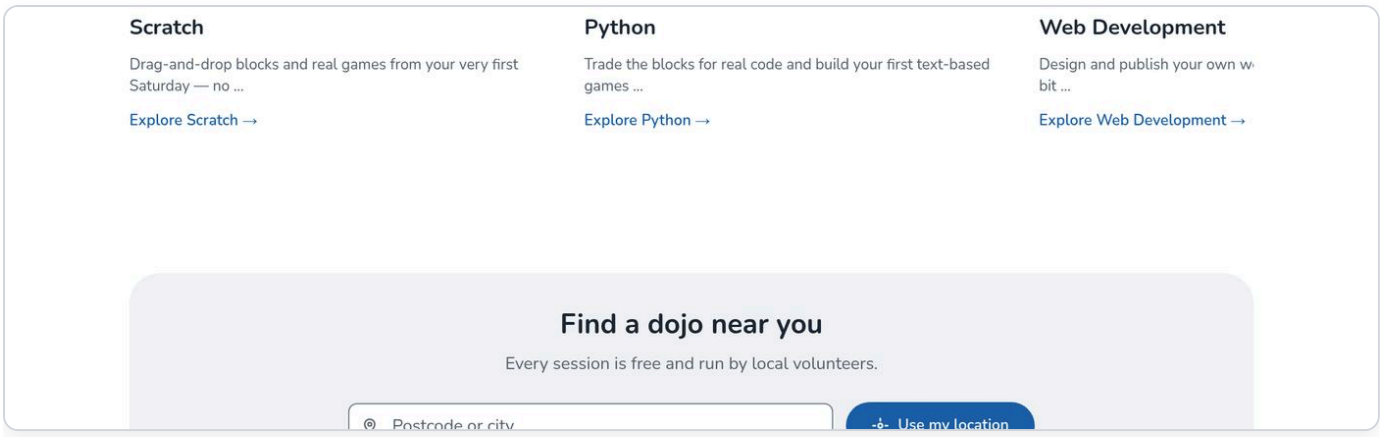

Discover CoderDojo

A parent lands on the homepage. Featured events take turns at the top, one at a time, and the dojo finder and the upcoming-sessions carousel are right there, no account needed.

/

Step 1 Discover CoderDojo (continued)

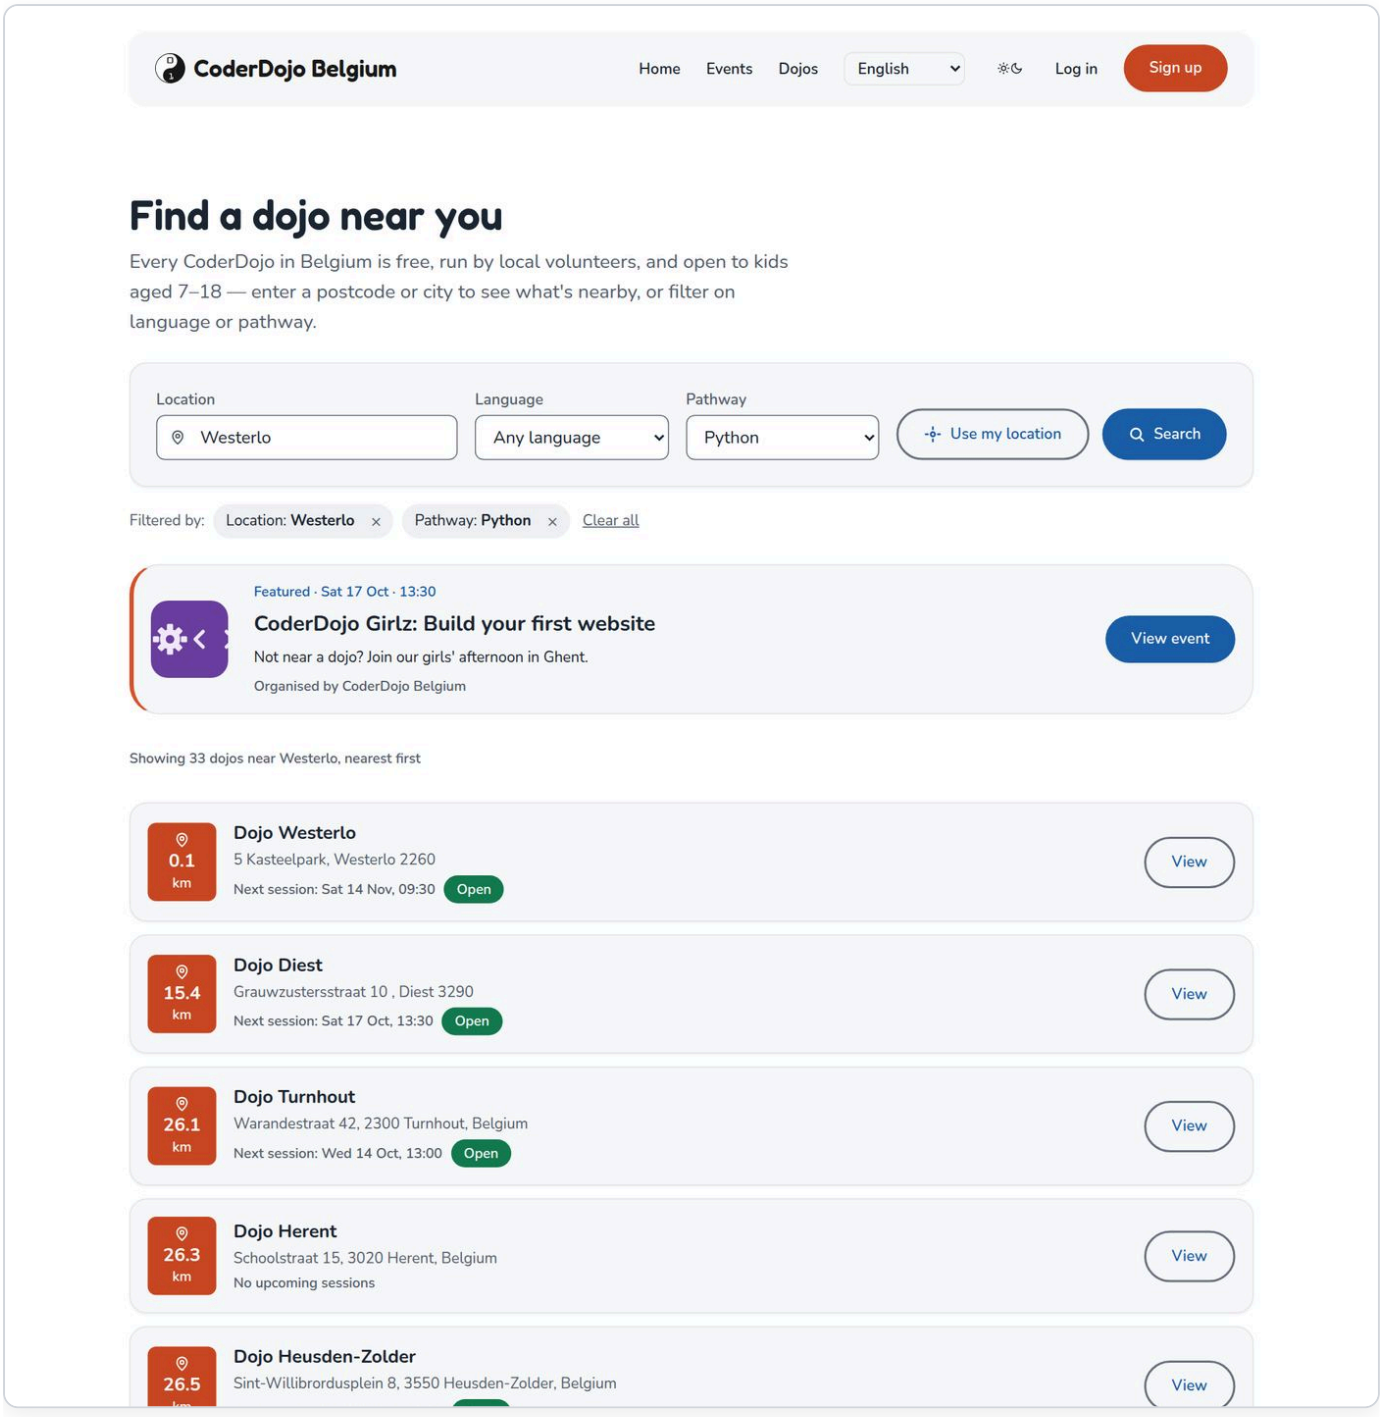

Step 2

Find a dojo nearby

The dojo finder sorts dojos by distance from a typed address, the browser's location or (logged in) the family's postcode, and filters them by language and pathway; each applied filter shows as a chip that removes it.

`/dojos/?location=Westerlo&pathway=2`

Step 2 Find a dojo nearby (continued)

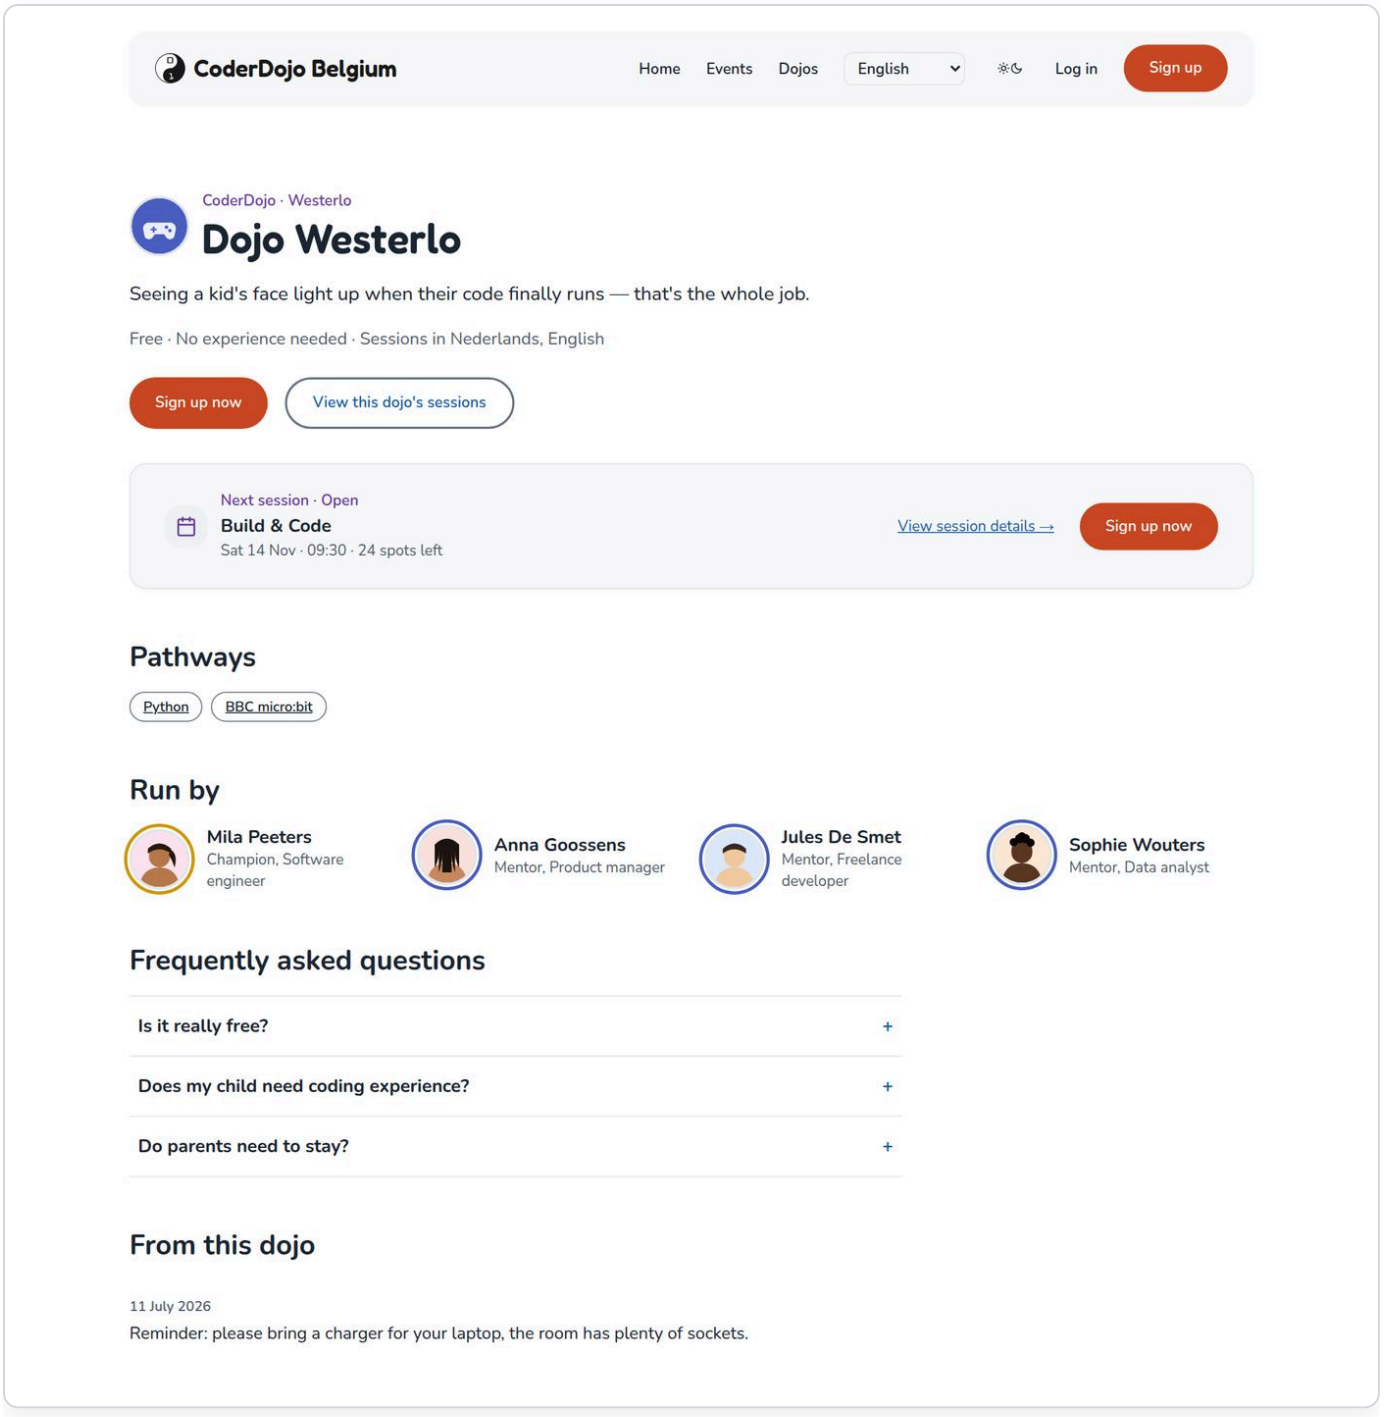

Step 3

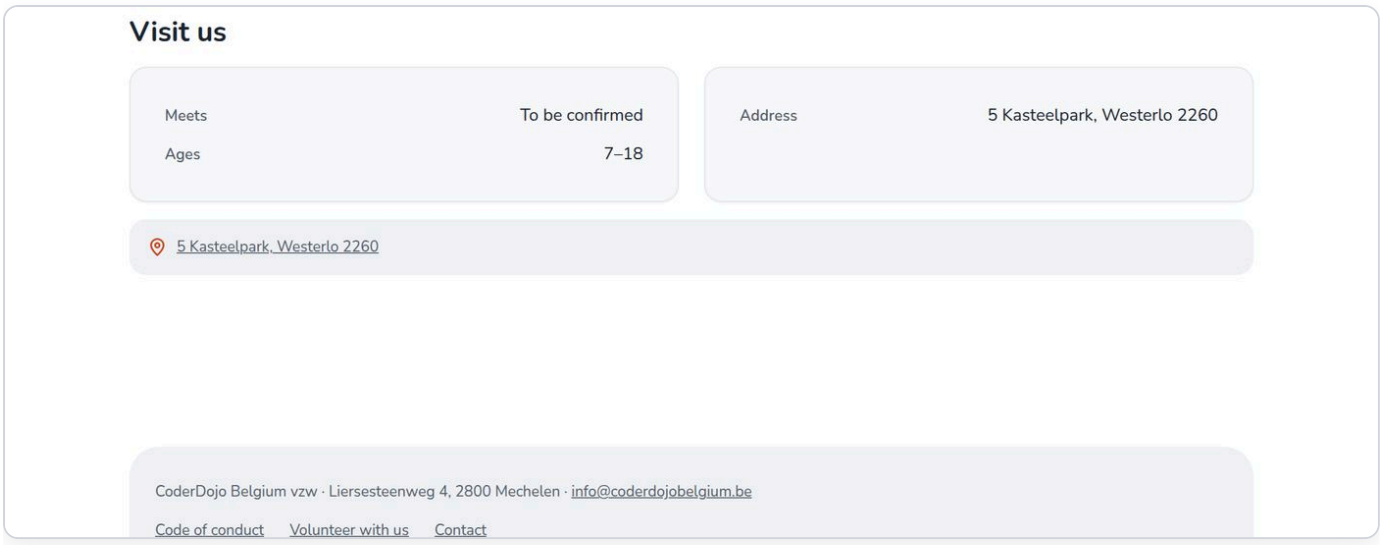

A dojo's page

Each dojo has a page with its languages, next sessions, team, updates and the pathways it offers.

`/dojos/51/`

Step 3 A dojo's page (continued)

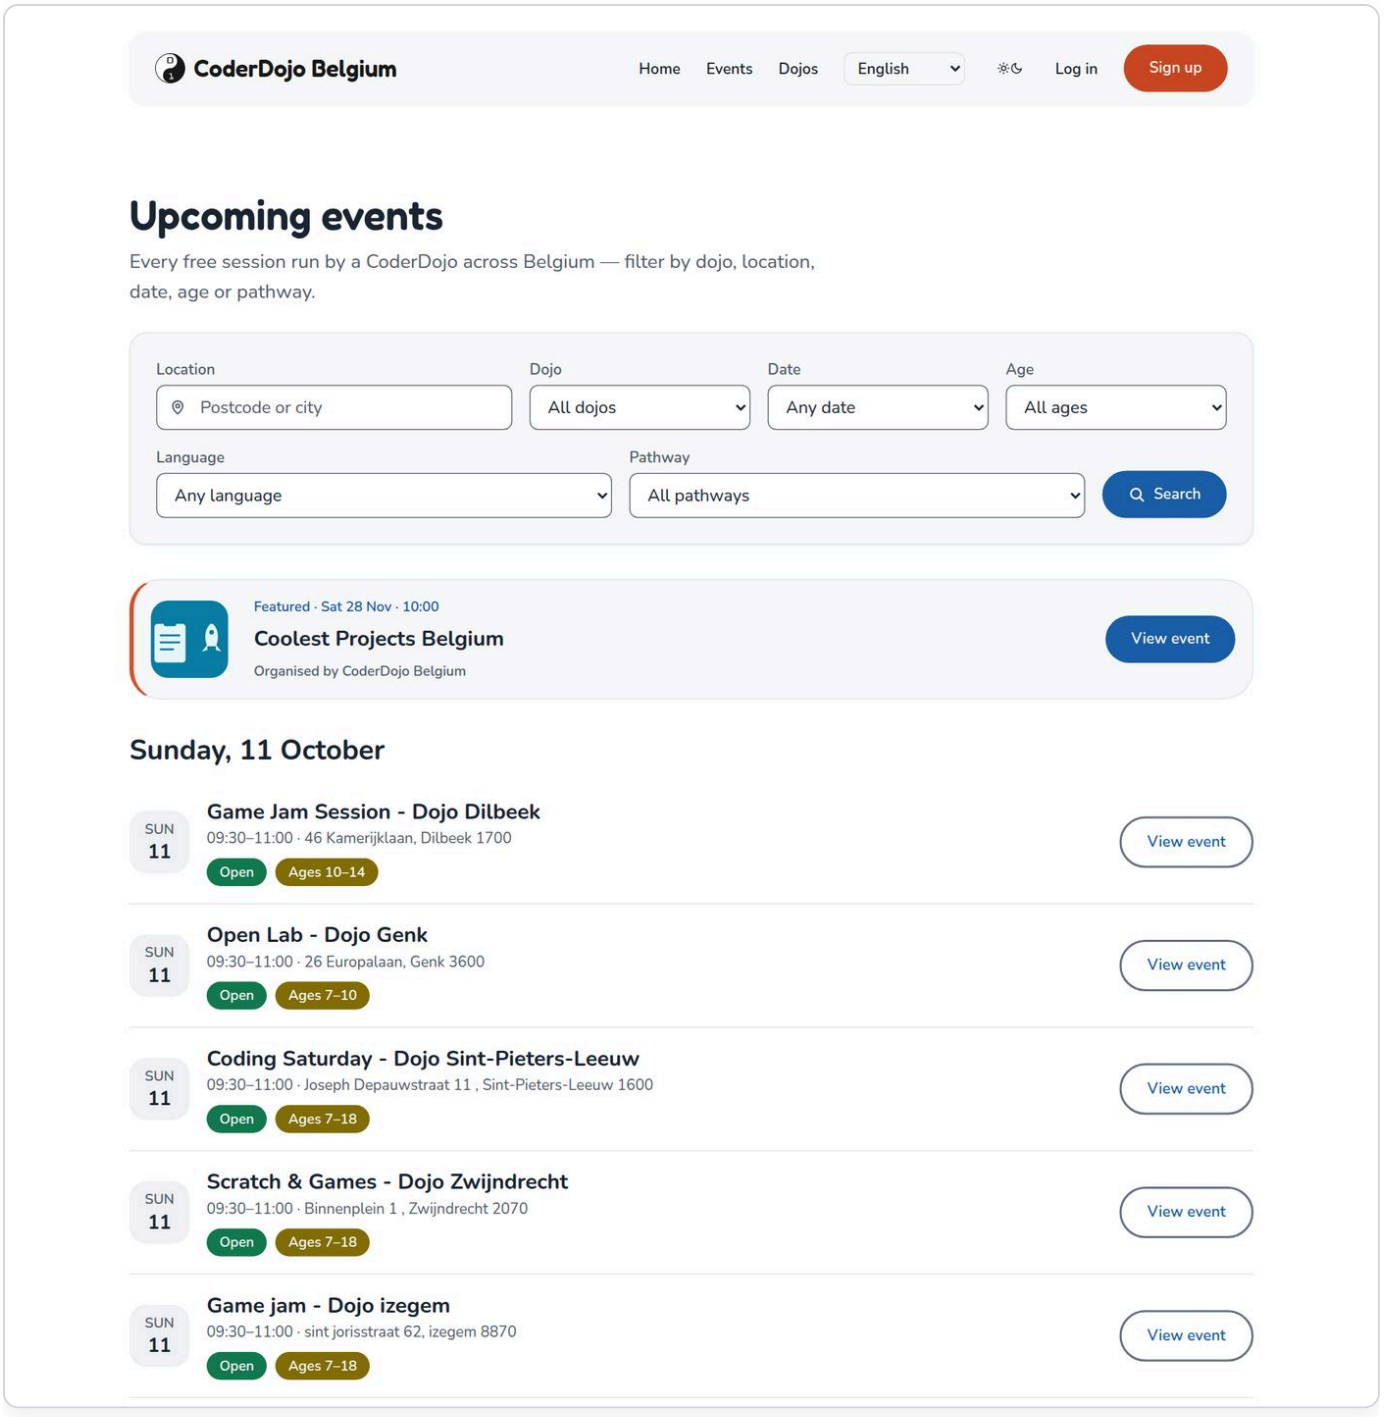

Step 4

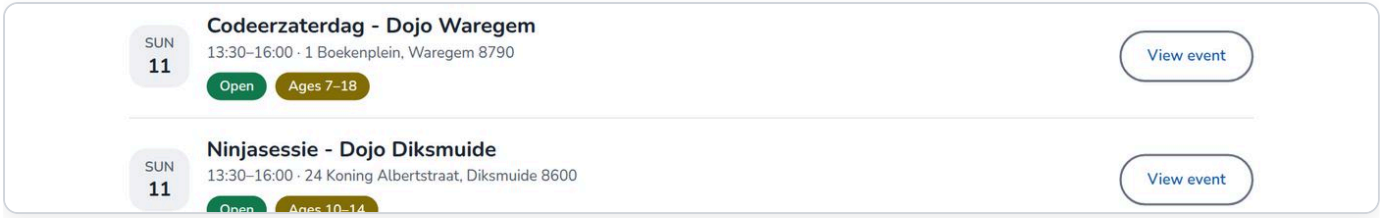

Browse sessions

All upcoming sessions, near a place or not, filterable by dojo, date, age, language and pathway.

`/events/`

Step 4 Browse sessions (continued)

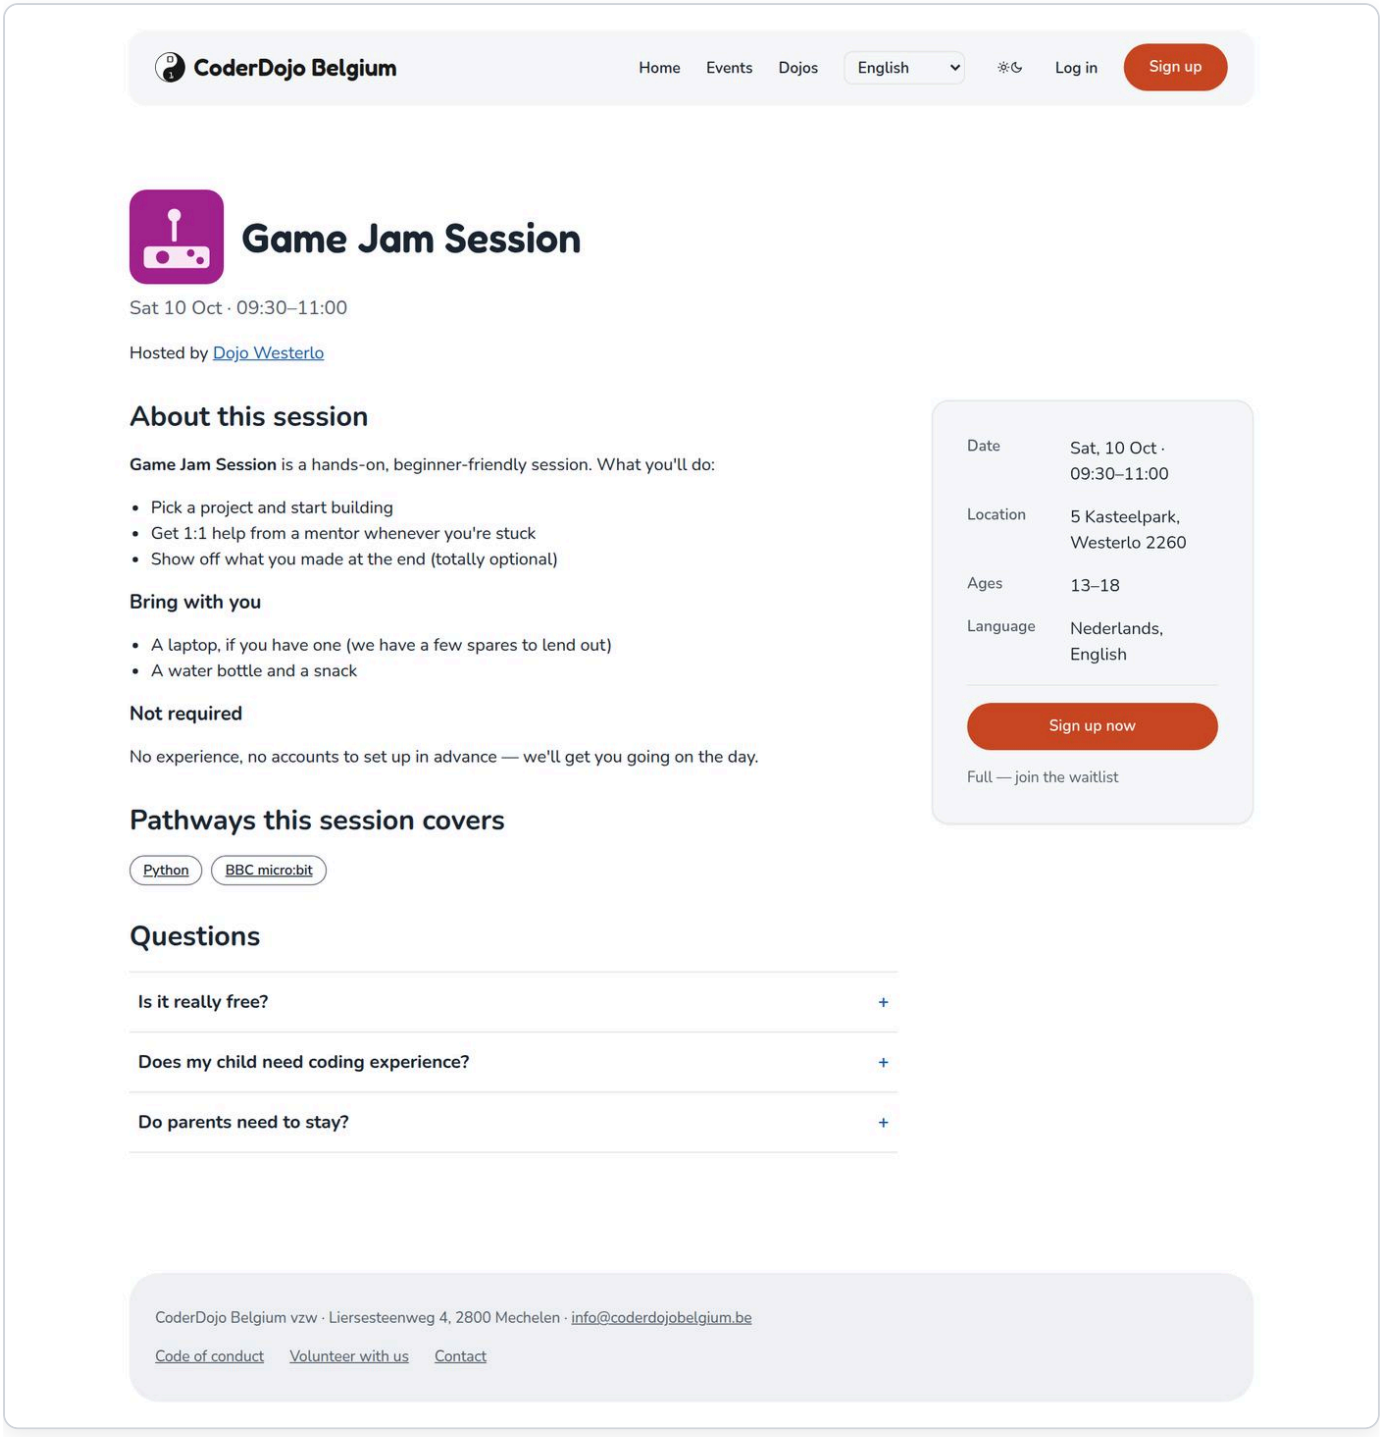

Step 5

A full session

When a session is full, families can still join the waiting list; they move up automatically when a place frees up.

`/events/76/`

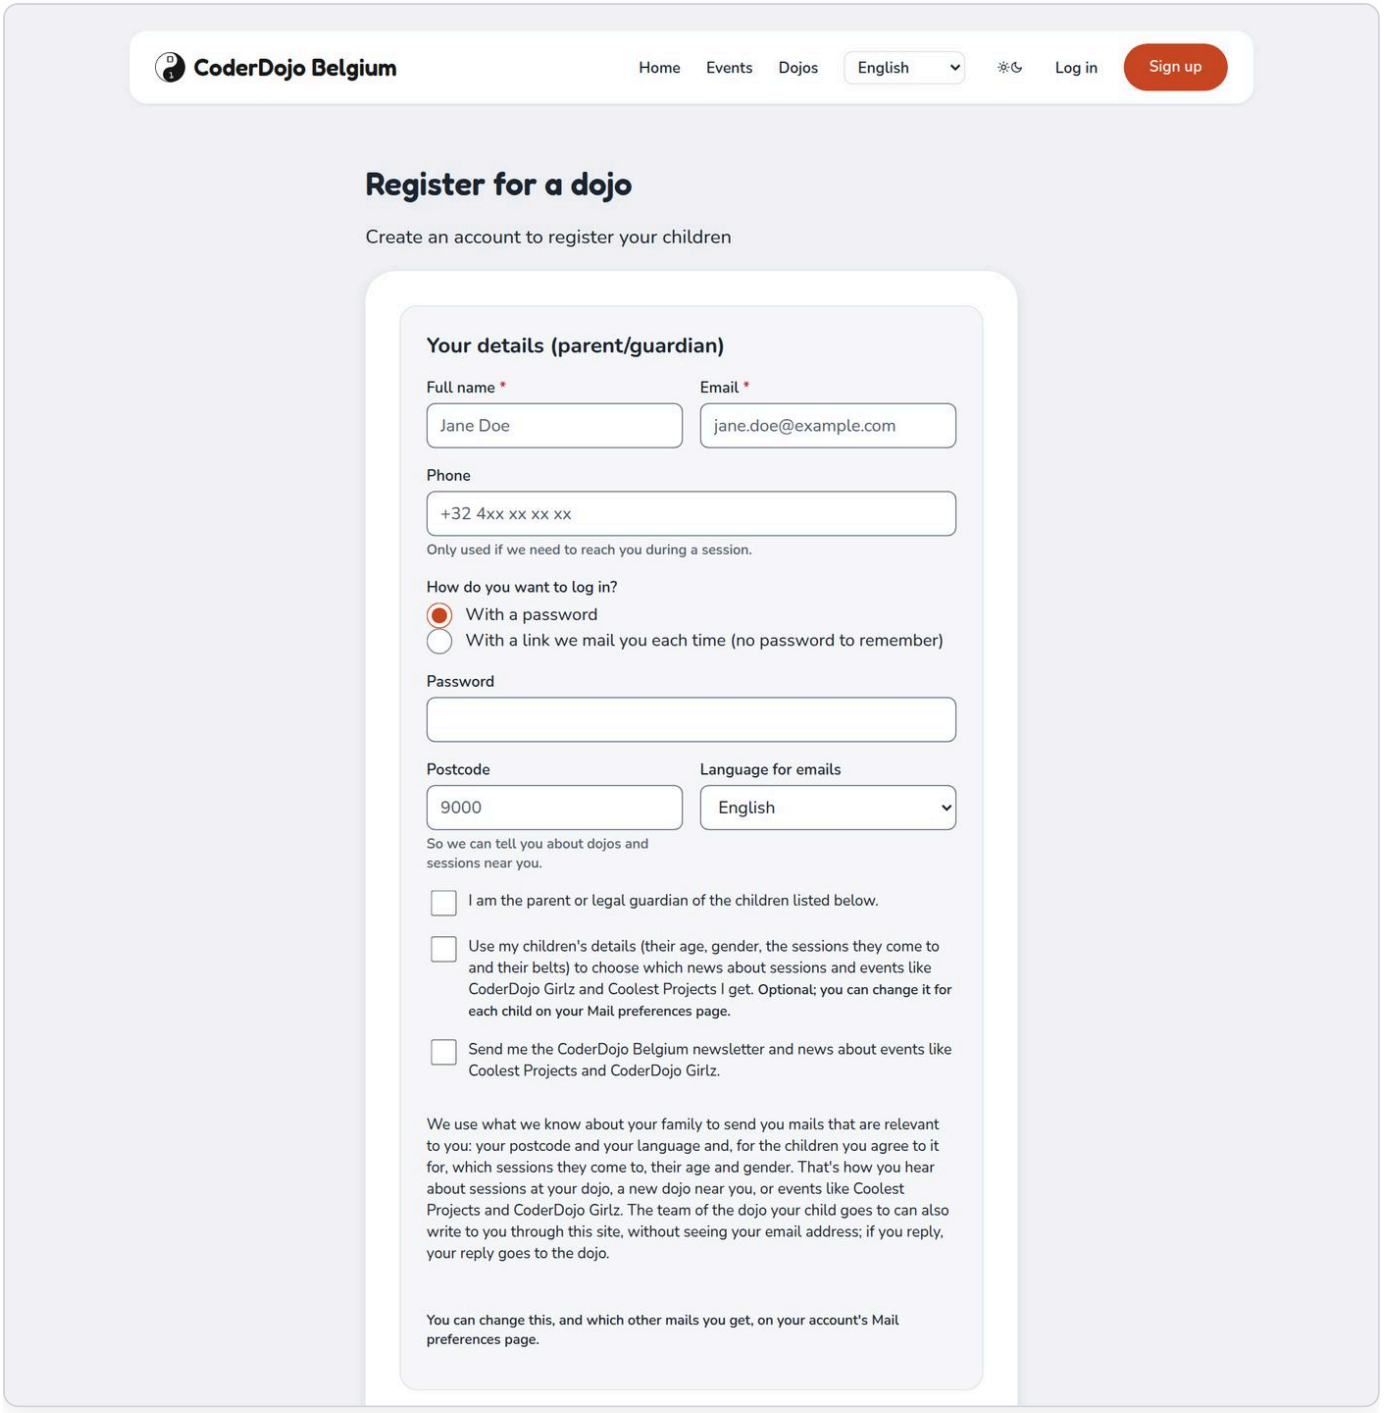

Step 6

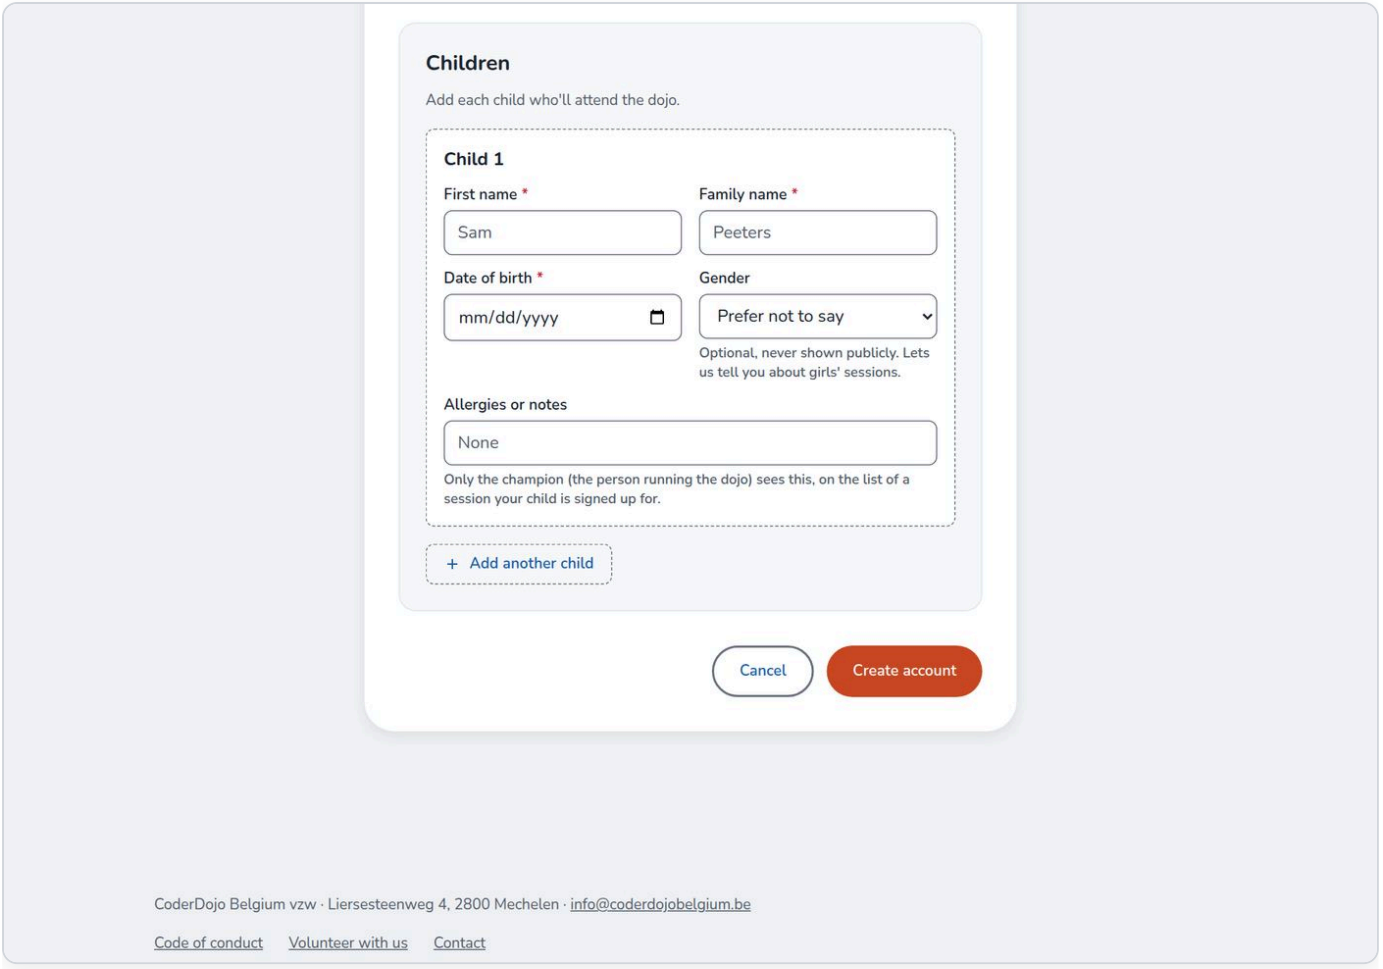

Create a family account

Self-service sign-up: the parent's details, one row per child (add more with “Add another child”), mail language and optional consents. No approval needed.

`/register/guardian/`

Step 6 Create a family account (continued)

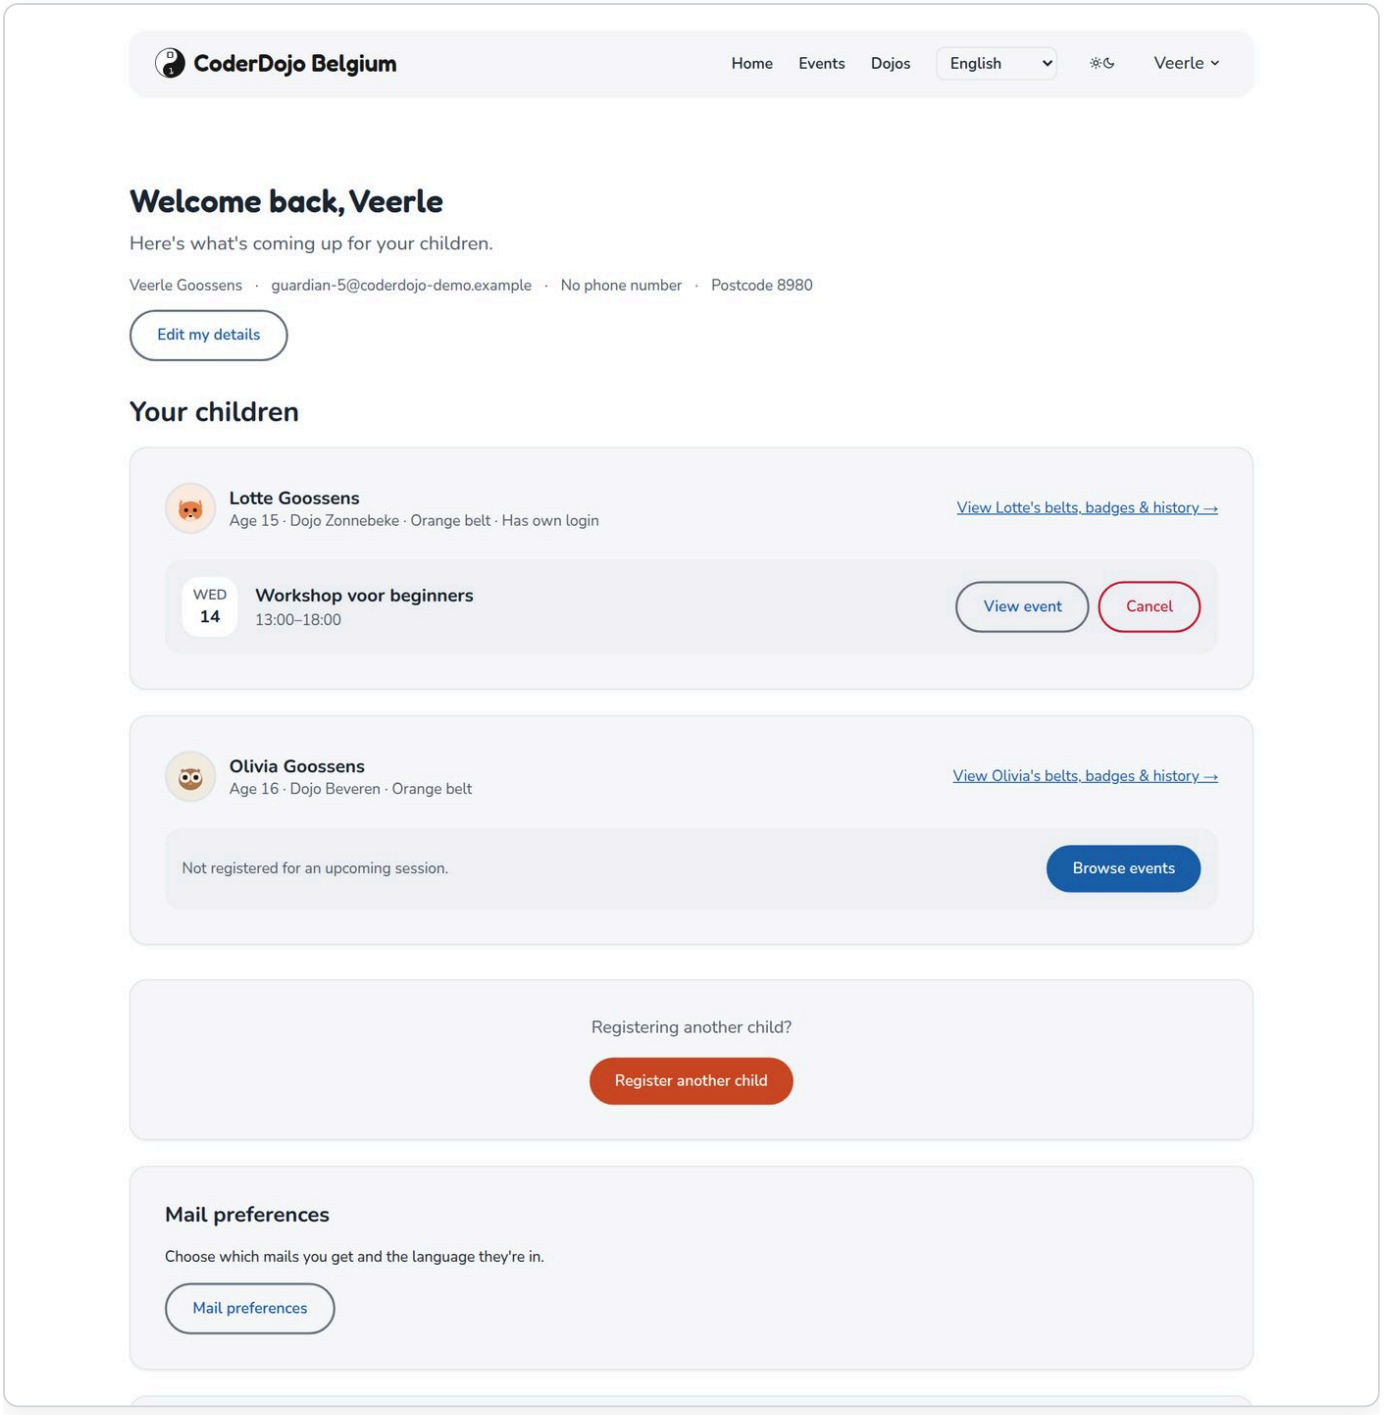

Step 7

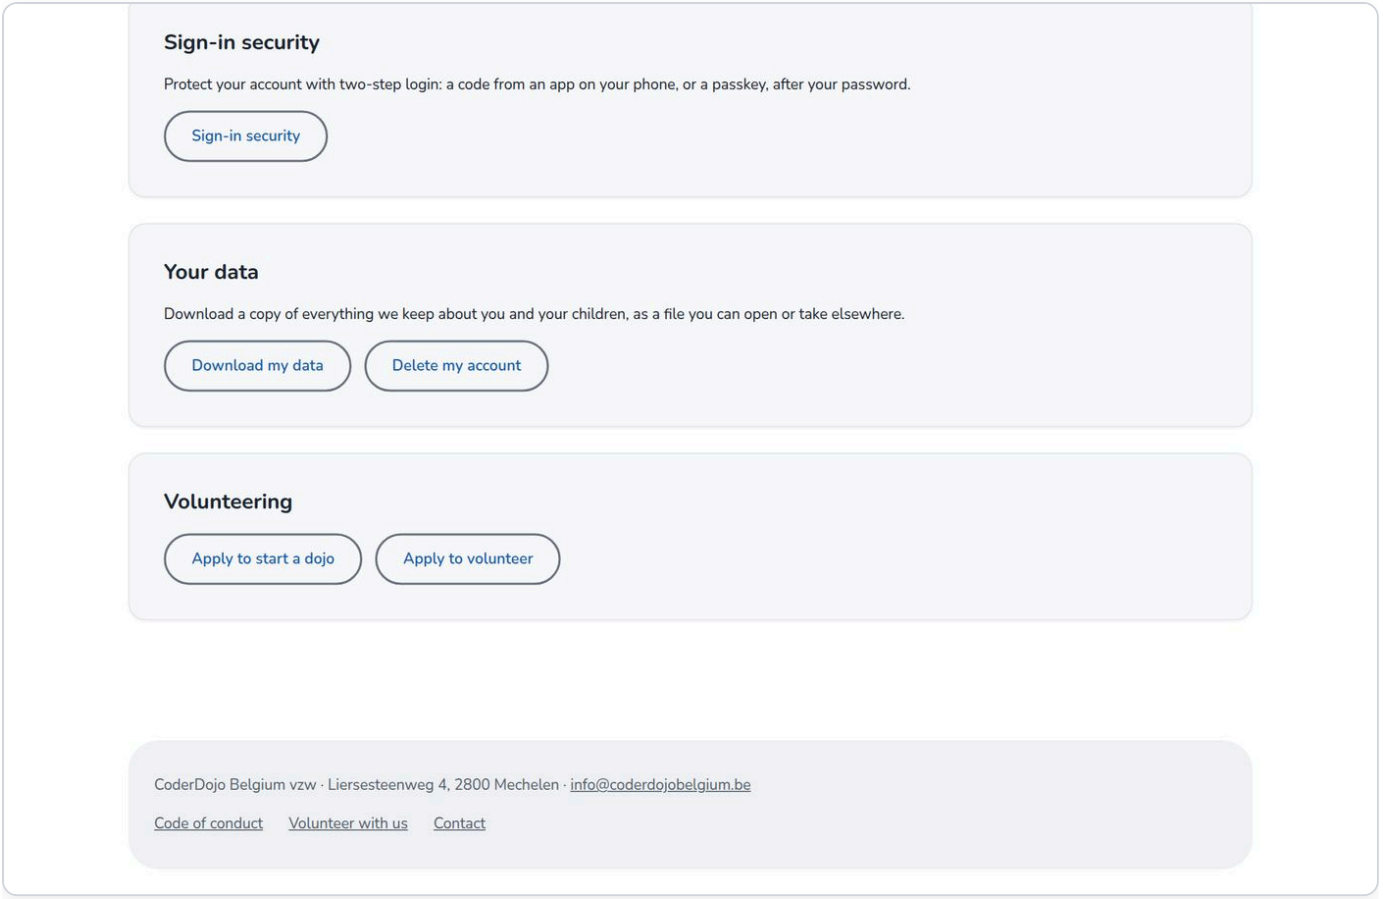

The family's account page

After logging in, the account page shows the parent's details (edited in place), each child, their upcoming places (and waiting-list positions) and links to mail preferences, security and privacy.

`/account/`

Step 7 The family's account page (continued)

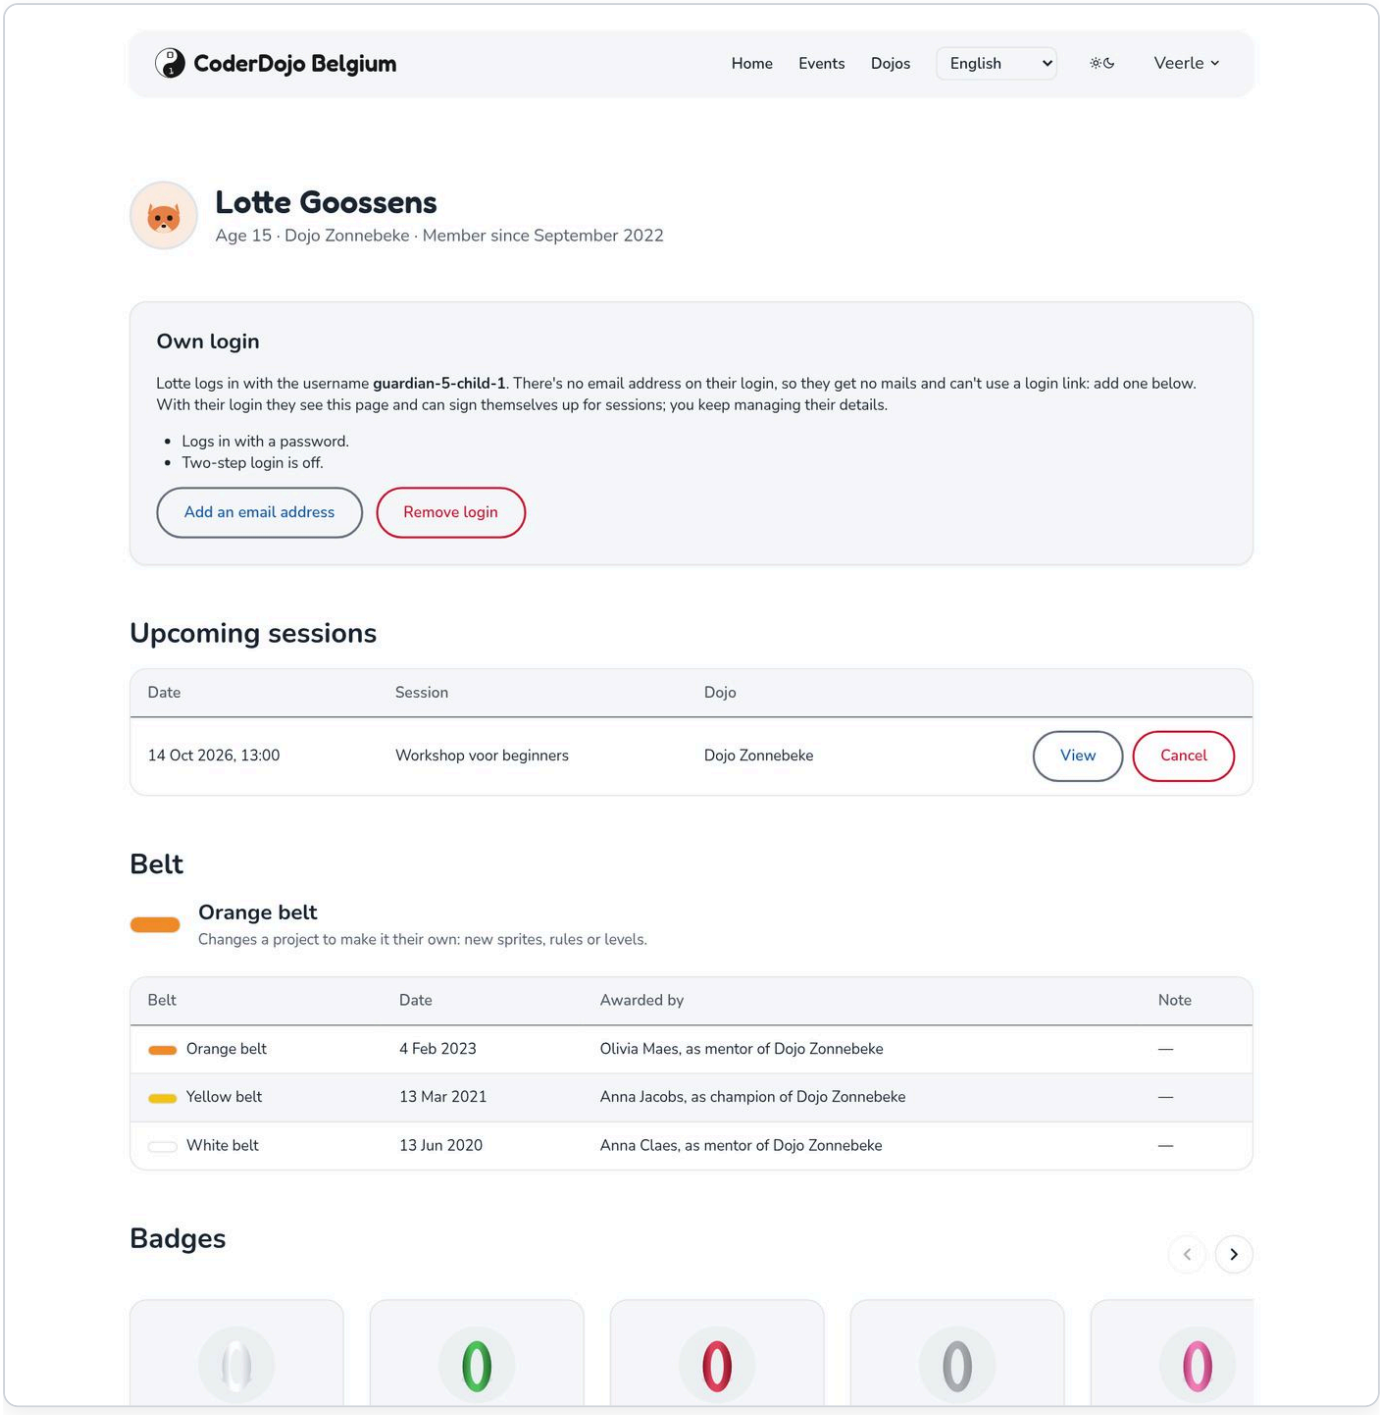

Step 8

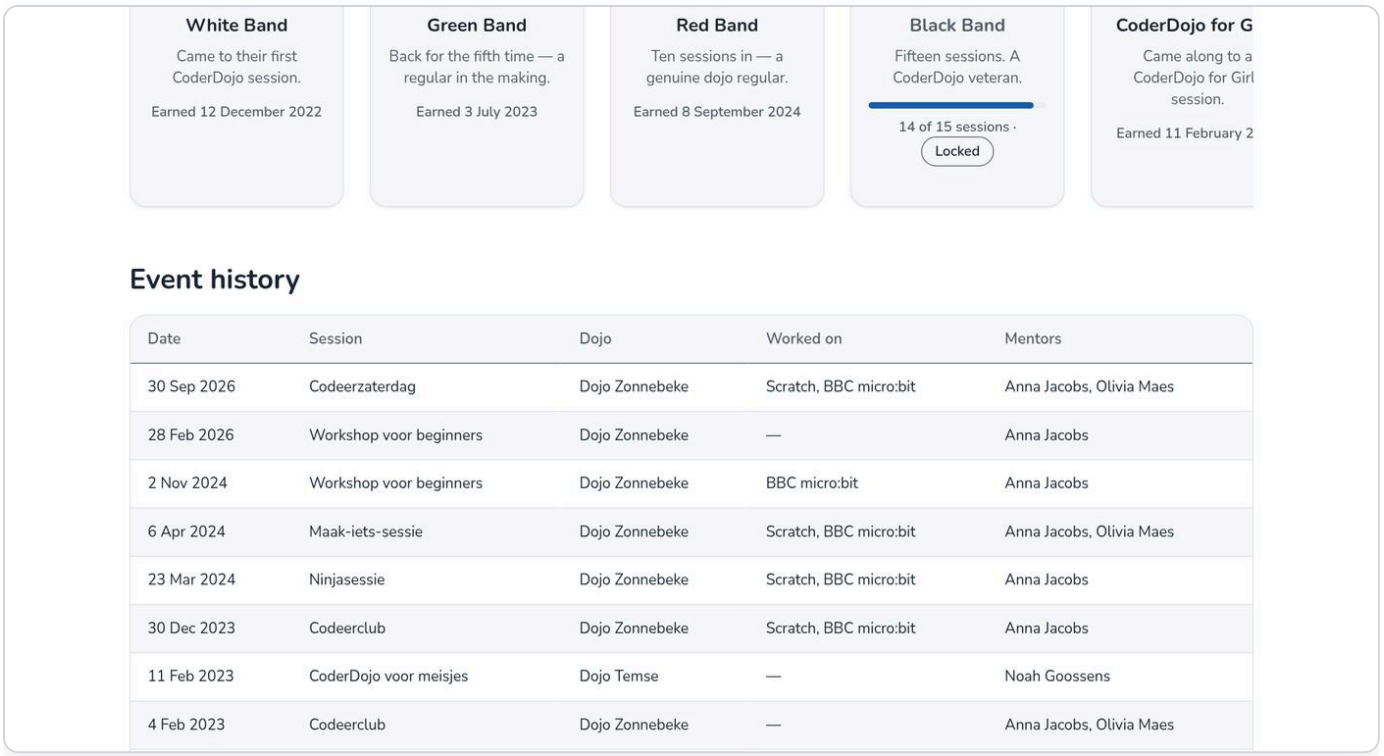

A child's page

Per child: details, belt, badges, sessions attended and upcoming, and whether the child has a login of their own.

`/account/ninja/9/`

Step 8 A child's page (continued)

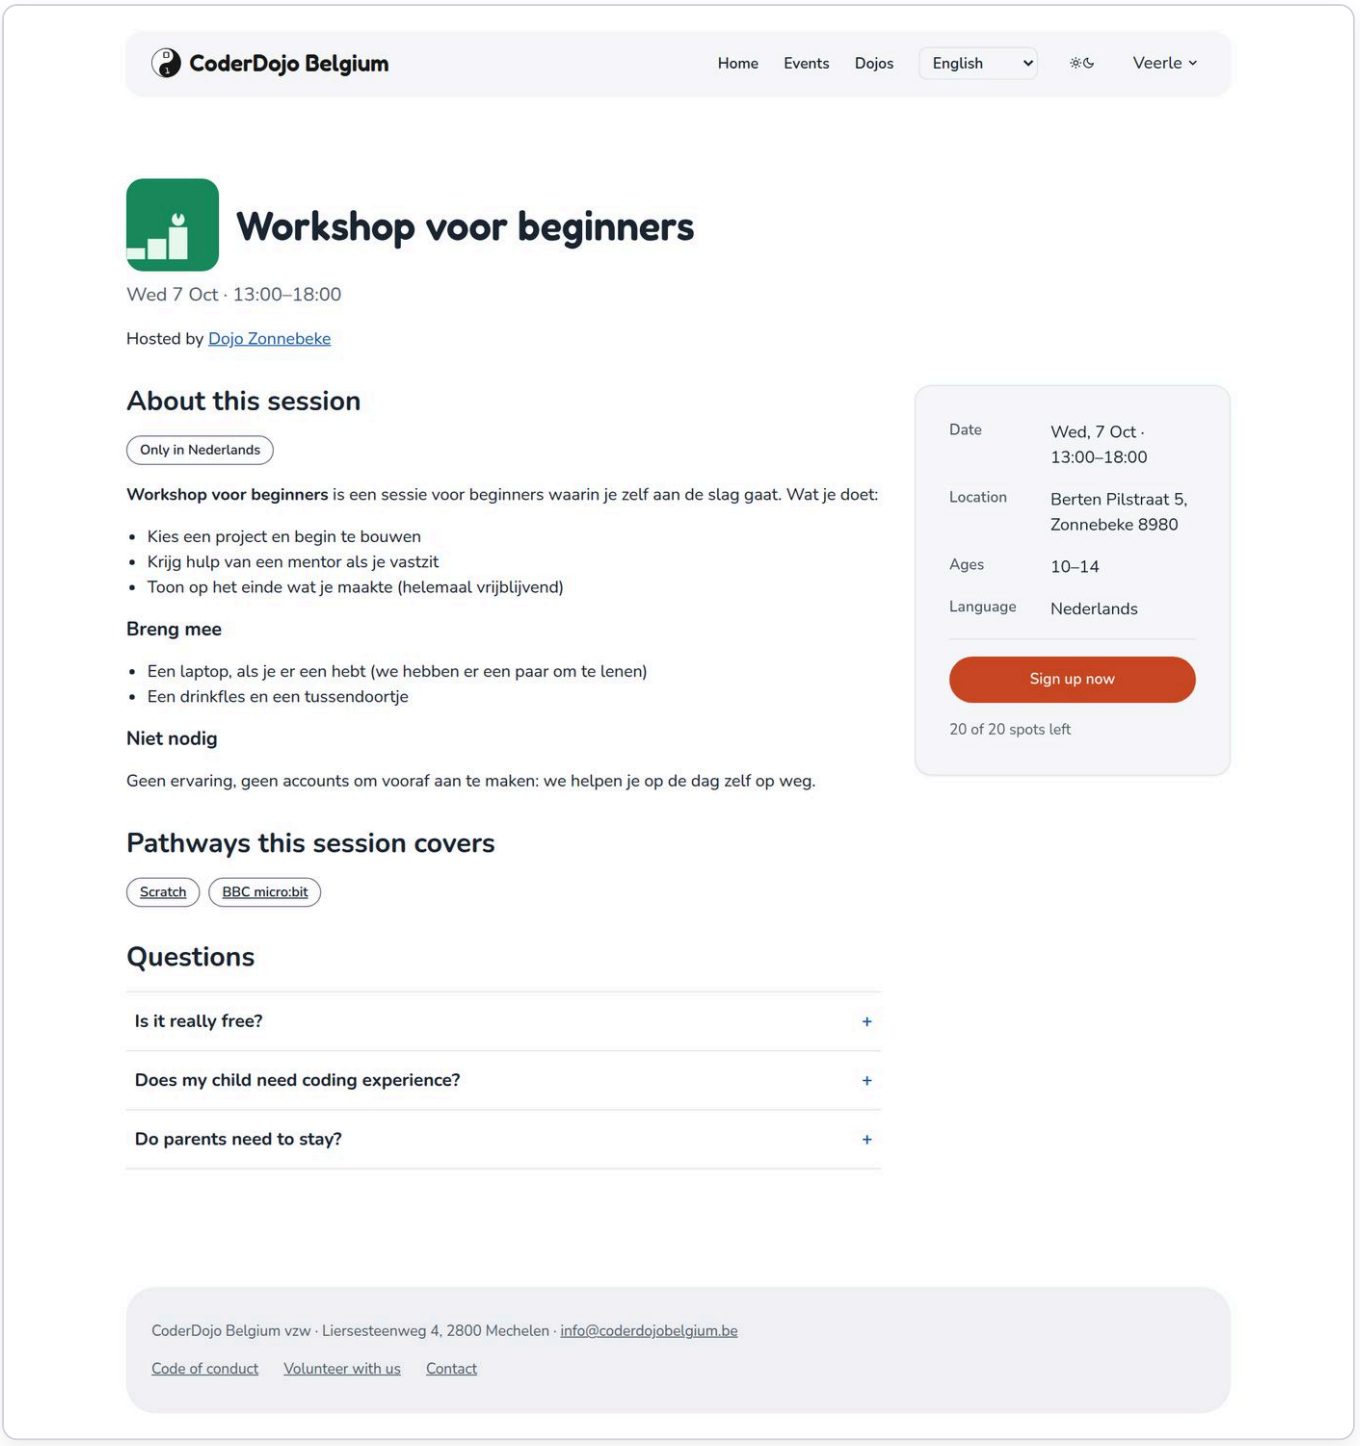

Step 9

Pick a session

The parent opens a session at the child's home dojo.

`/events/71/`

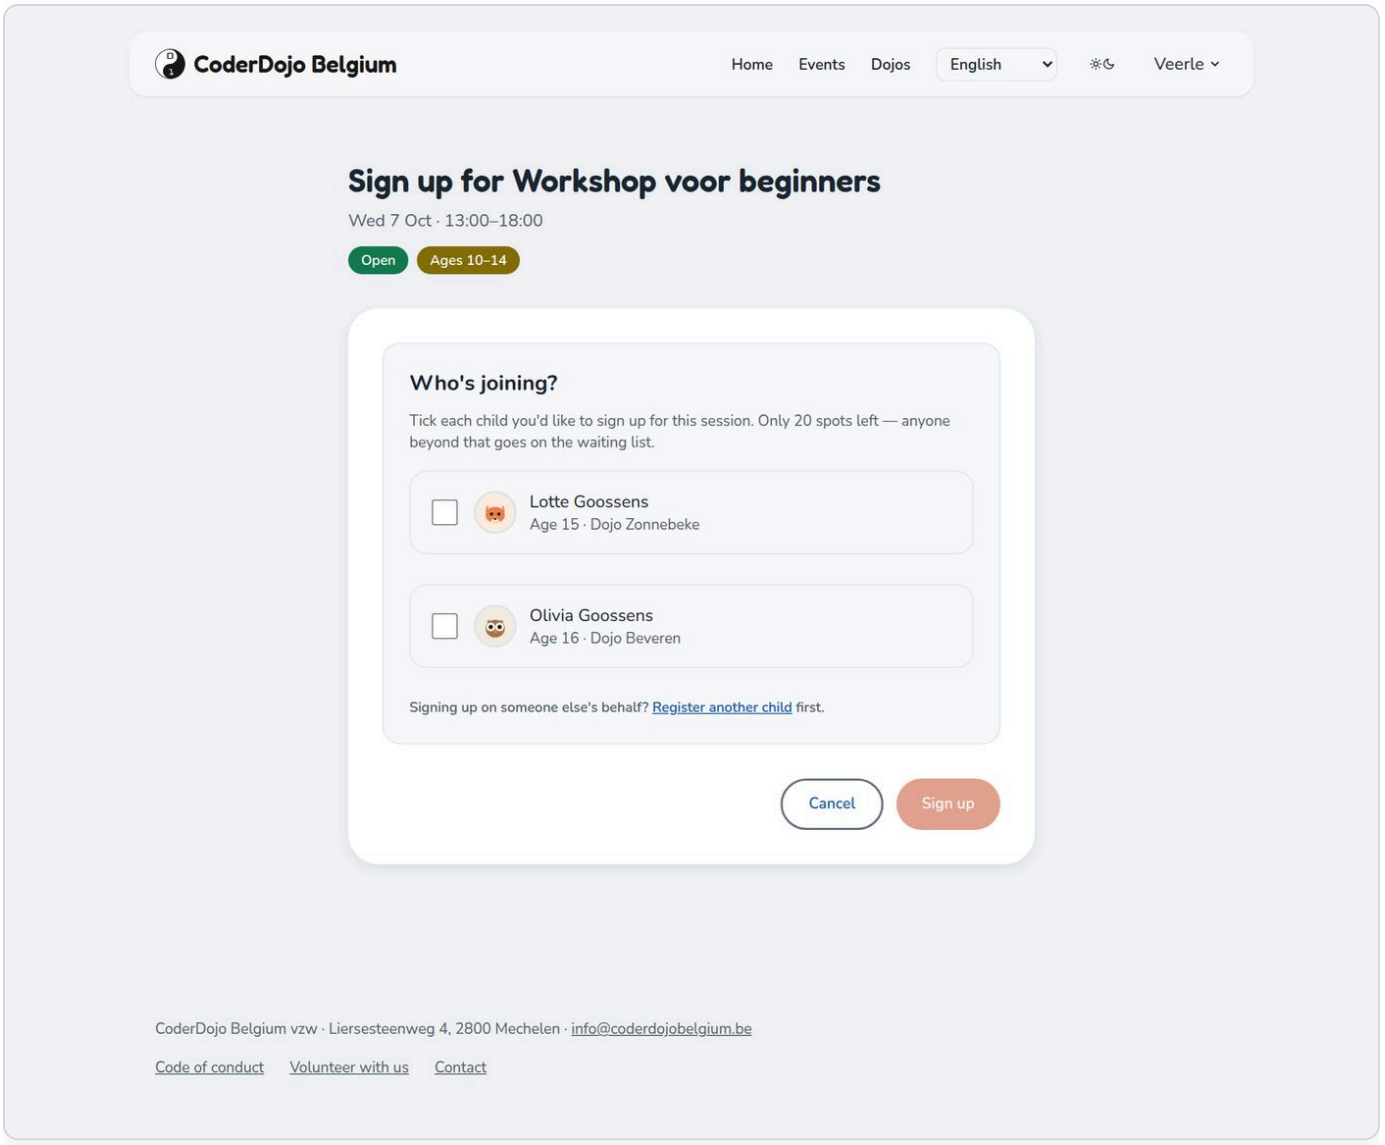

Step 10

Choose which children go

The sign-up page lists the family's children; the ones already signed up are marked.

`/events/71/signup/`

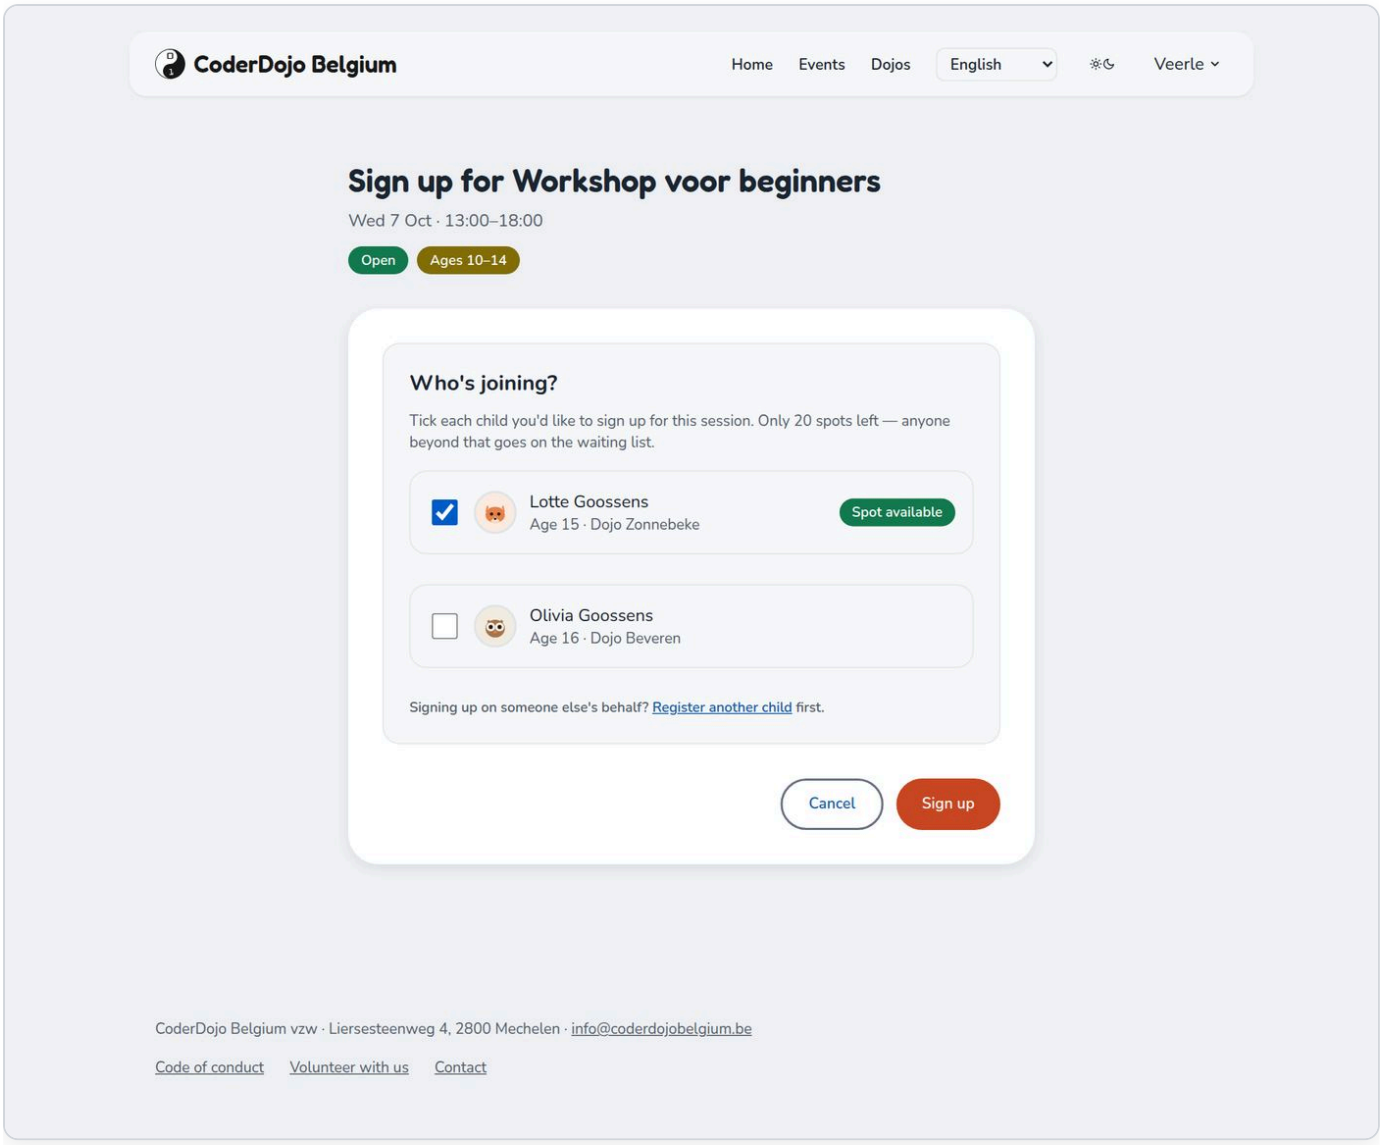

Step 11

Confirm

Tick the children and confirm.

`/events/71/signup/`

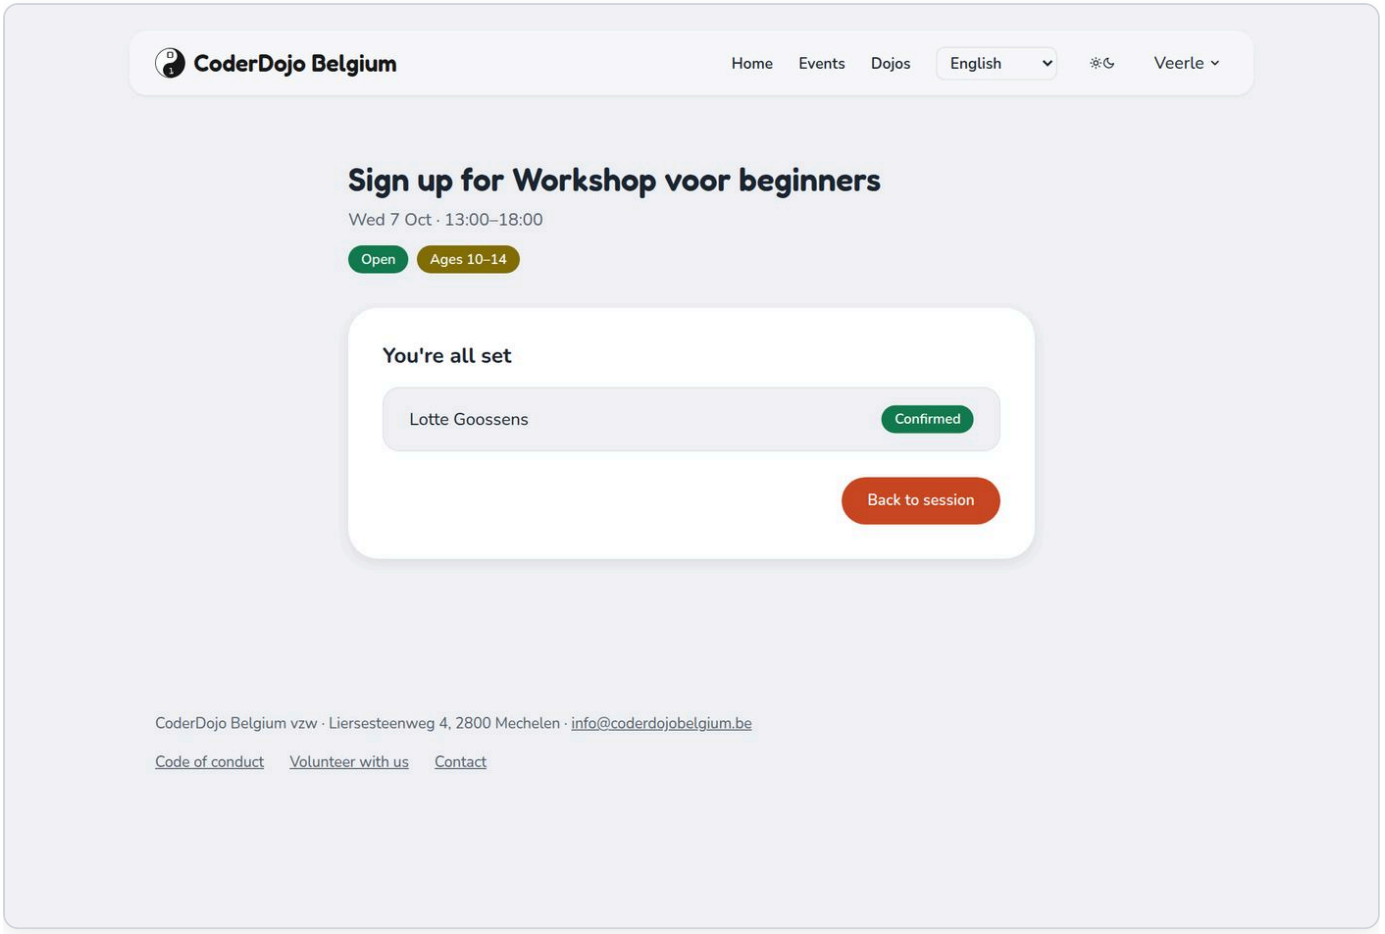

Step 12

Signed up

The place is confirmed on the spot (or the child joins the waiting list), and a confirmation mail is queued.

`/events/71/signup/`

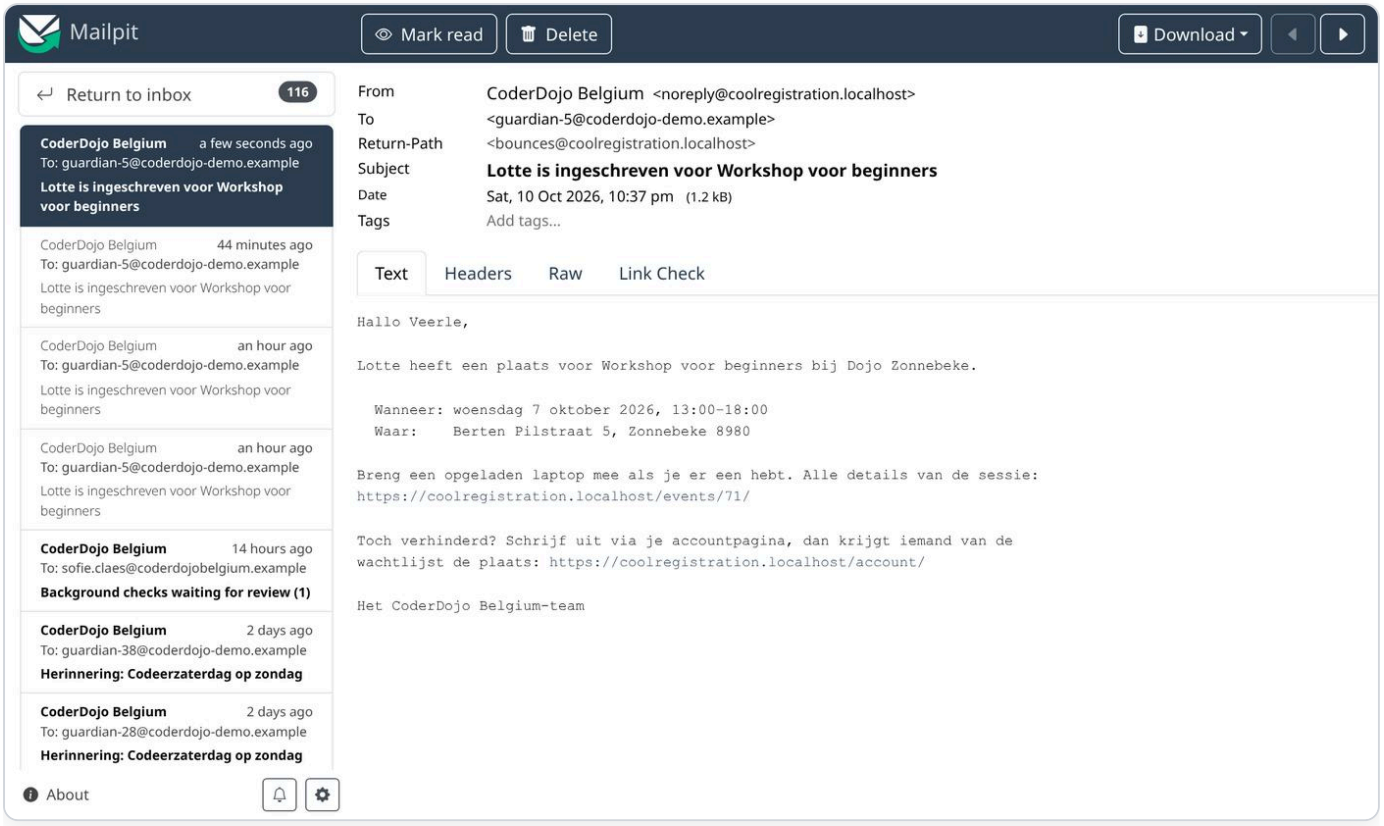

Step 13

The confirmation mail

The booking confirmation arrives in the parent's chosen mail language (here Dutch). In development every mail lands in Mailpit.

`/mails/view/7maQdof90dMSdgOyOzECux`

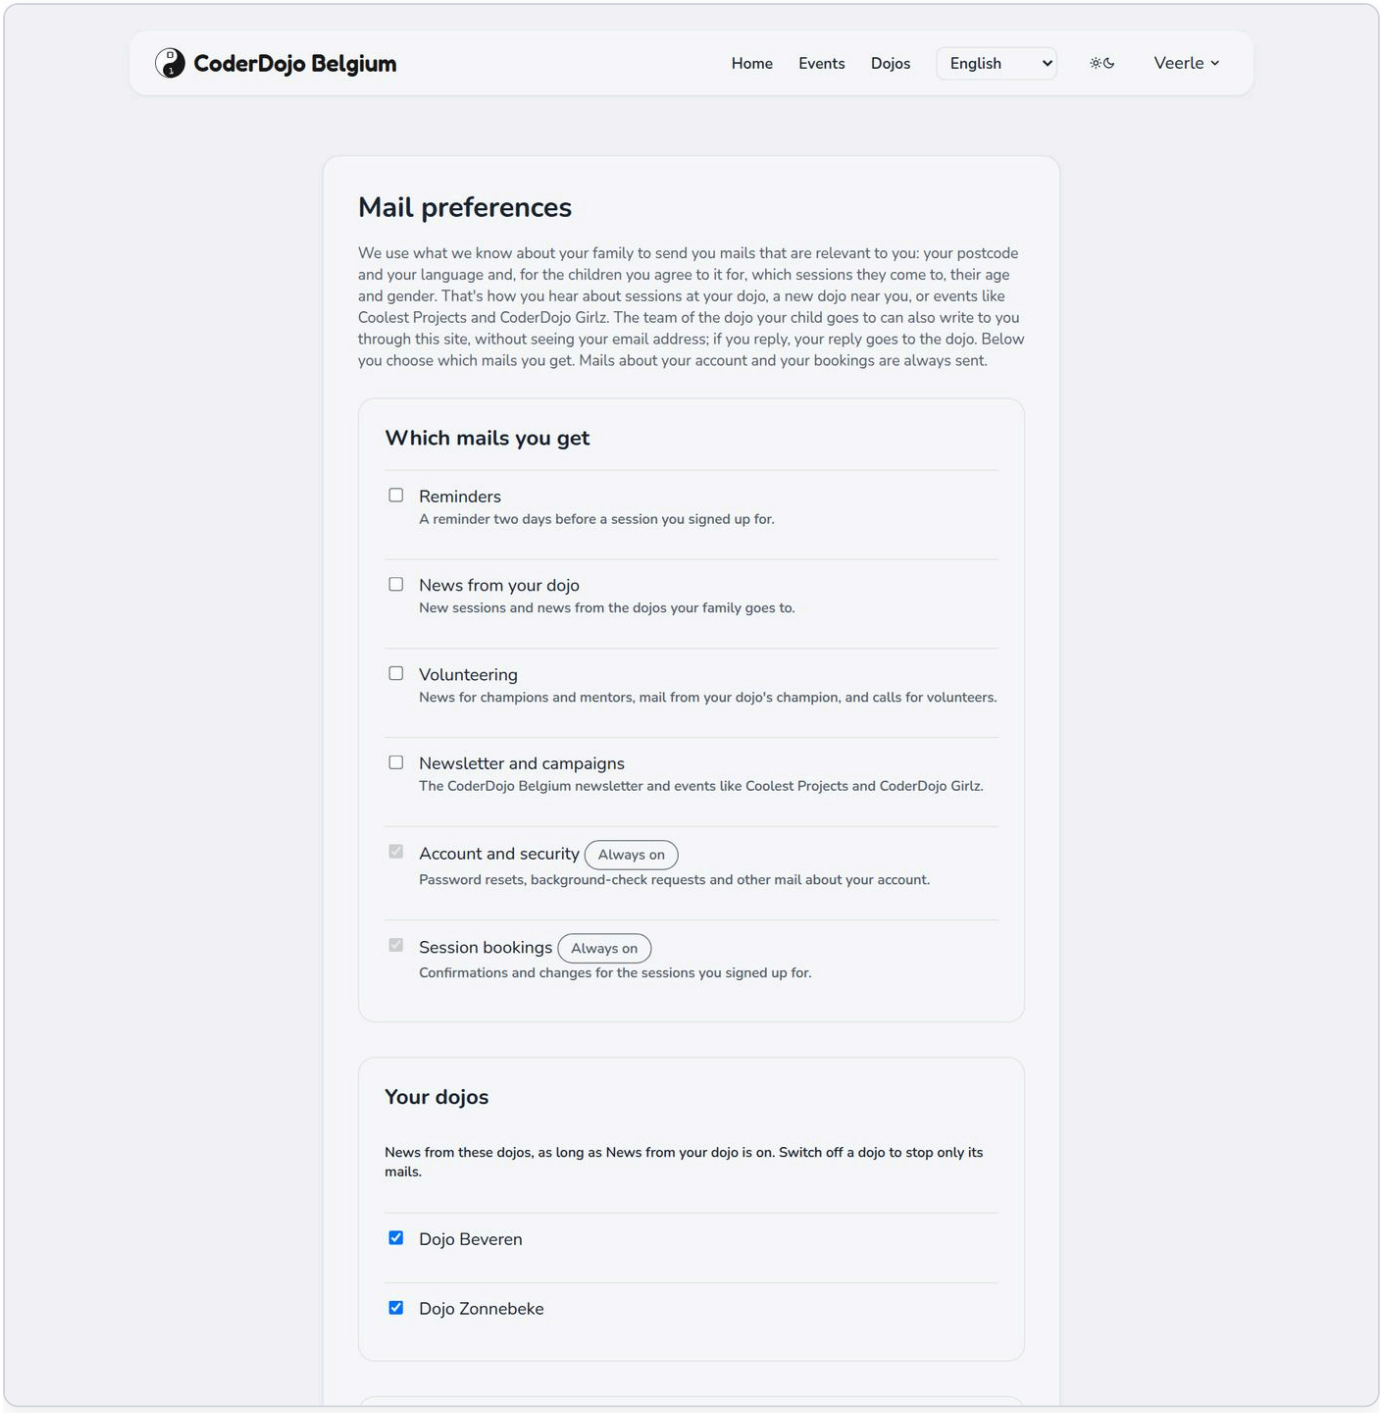

Step 14

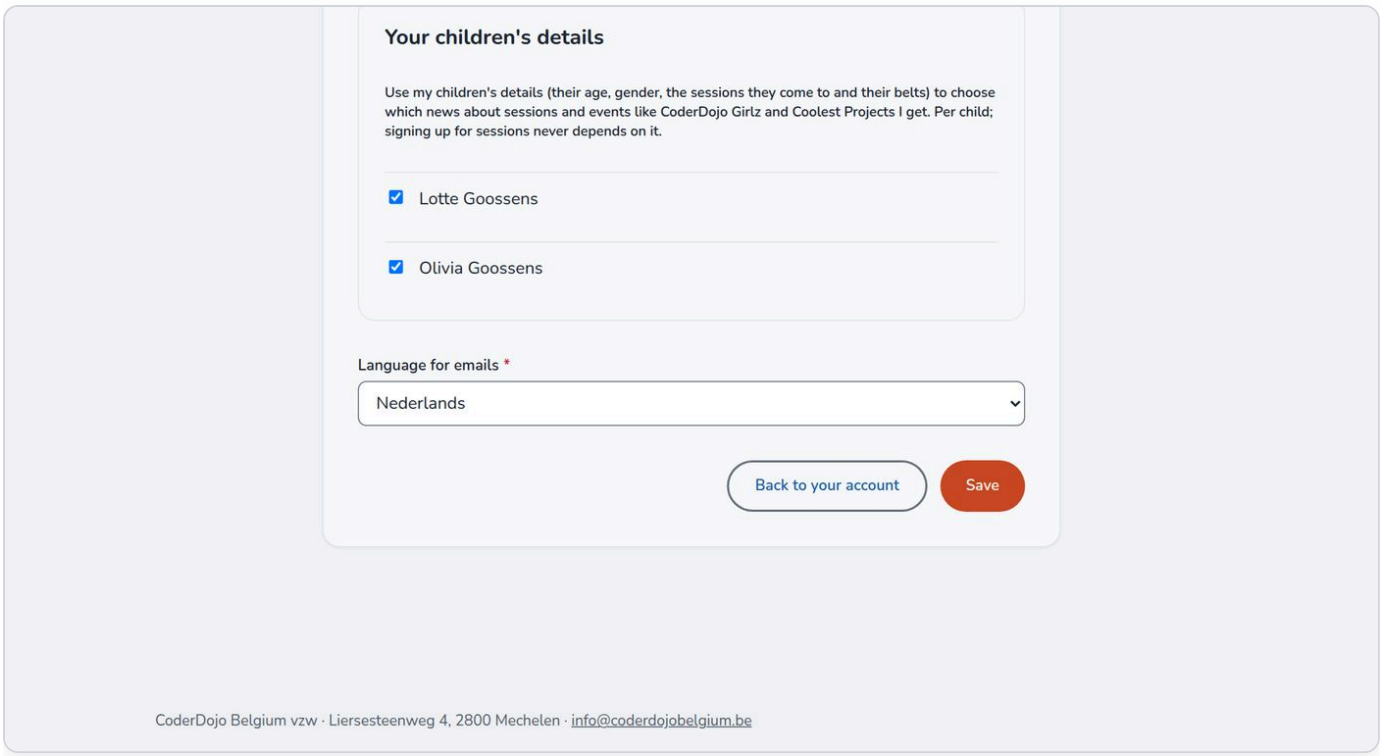

Mail preferences

The parent chooses which kinds of mail they get, mutes a dojo's news, and gives or withdraws consent per child.

`/account/mail/`

Step 14 Mail preferences (continued)

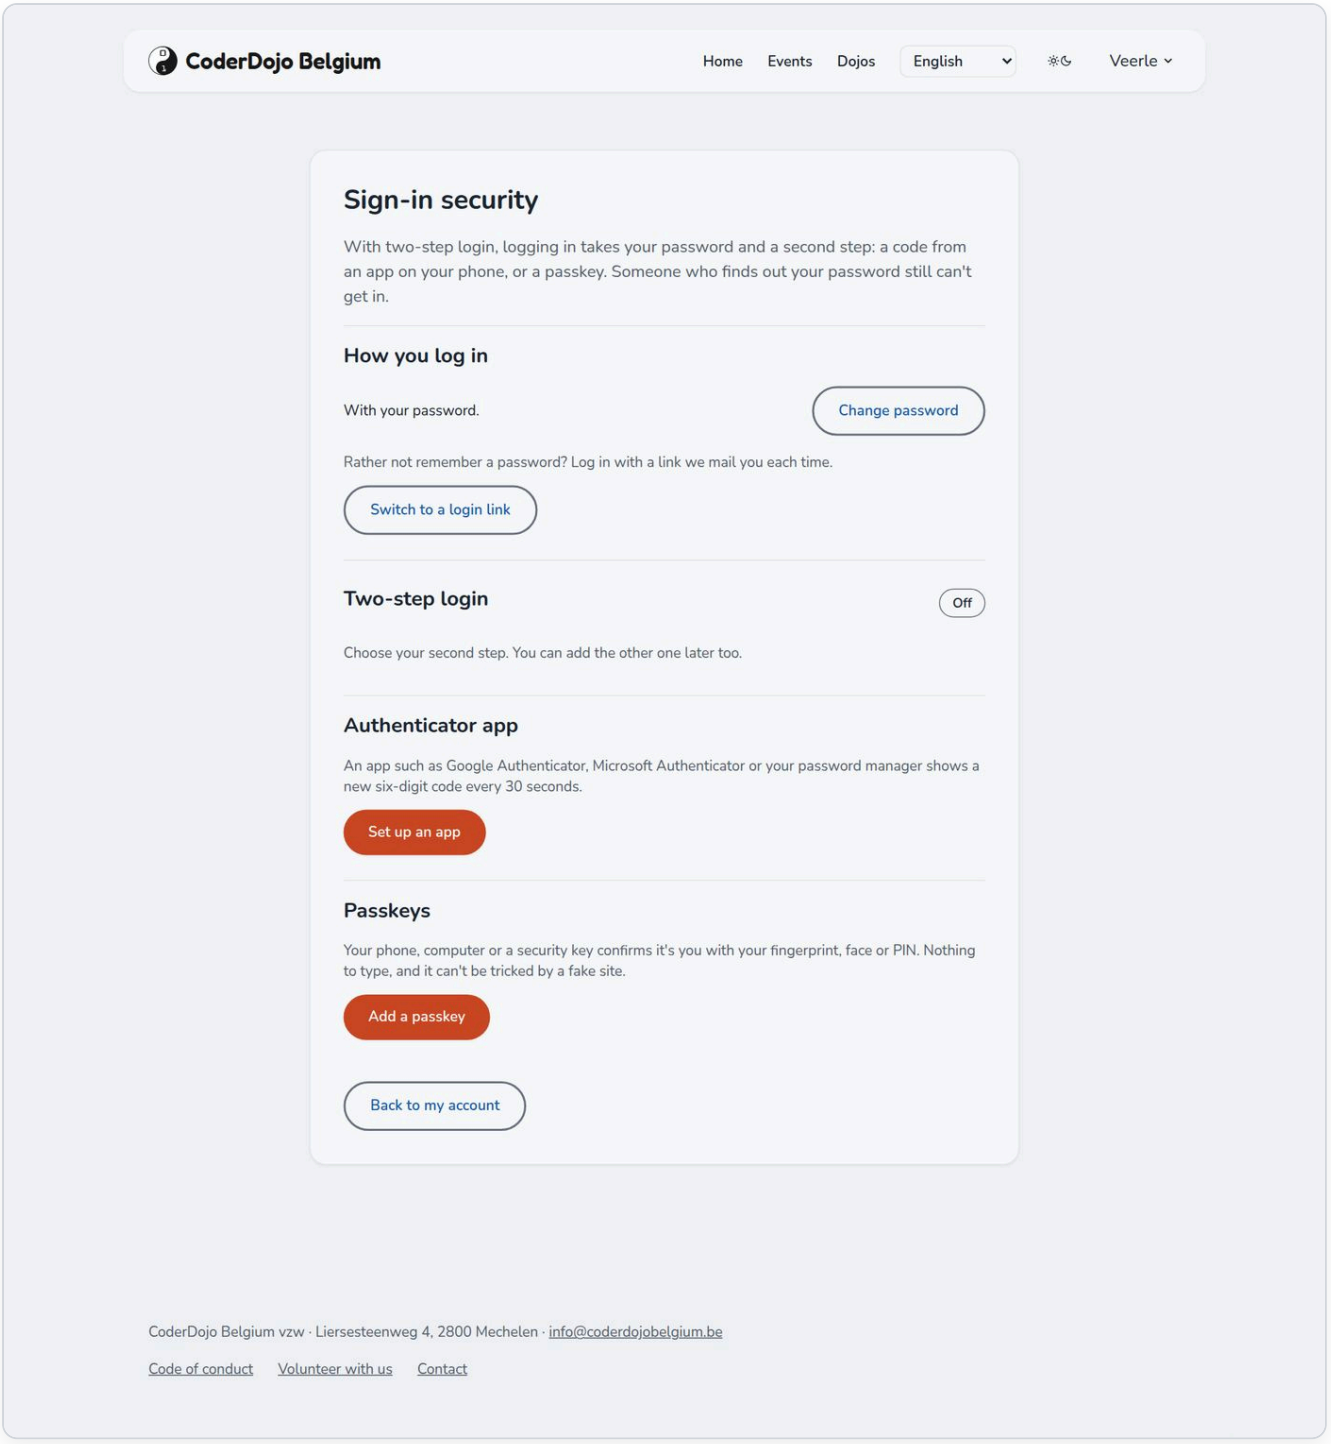

Step 15

Sign-in security

Optional two-step login (authenticator app, passkeys, backup codes), or switching to login links instead of a password.

`/account/security/`

Step 16

Privacy: export or delete

From the account page the family downloads all its data, or deletes the account after confirming with the password.

`/account/delete/`
