

CODERDOJO BELGIUM

One place for every dojo

Registration, volunteers and communication for Belgium's free coding clubs, in one platform.

Platform pitch

October 2026

Why a platform

Free coding clubs for kids aged 7–17, run entirely by volunteers

Families

Find a dojo nearby, sign the children up, know they're safe.

Volunteers

Get vetted once, then help at any dojo without paperwork.

The organisation

Reach families, promote events and stay GDPR-compliant.

Who it serves

Six people, one platform

Parent

Finds a dojo, signs children up, follows their progress.

Ninja

A child with an optional login of their own.

Mentor

A vetted volunteer who helps at one or more dojos.

Champion

Runs a dojo: sessions, team, mail to families.

Reviewer

Checks criminal-record extracts and approves volunteers.

Organisation

Campaigns, content, privacy and access.

PART 1

The journeys

From a parent's first visit to the organisation's newsletter.

Find a dojo, sign up in minutes

- Dojo finder sorted by real distance, filtered by language and pathway
- Upcoming sessions filtered by dojo, date, age, language and pathway
- One family account with every child, no approval needed
- Places are confirmed on the spot, or you join the waiting list

Everything for the family on one page

- Each child's upcoming places and waiting-list spots
- Cancel and the next child waiting moves up automatically
- Mail in the family's own language: English, Dutch or French
- Download all your data, or delete the account yourself

Belts, badges and a login of their own

- A parent can give a child aged 7–17 their own login
- Belts show skill; badges and wristbands reward showing up
- Every session attended, with what they worked on
- Ninjas can sign themselves up; parents stay in charge

Lotte Goossens

Age 14 · Dojo Zonnebeke · Member since September 2022

Upcoming sessions

Date	Session	Dojo	
30 Sep 2026, 13:00	Codeerzaterdag	Dojo Zonnebeke	View Cancel
7 Oct 2026, 13:00	Workshop voor beginners	Dojo Zonnebeke	View Cancel

Belt

Orange belt

Changes a project to make it their own: new sprites, rules or levels.

Belt	Date	Awarded by	Note
 Orange belt	4 Feb 2023	Olivia Maes, as mentor of Dojo Zonnebeke	—
 Yellow belt	13 Mar 2021	Anna Jacobs, as champion of Dojo Zonnebeke	—

Volunteer

Apply once, help at any dojo

- One application per person, not one per dojo
- The Belgian criminal-record extract is uploaded privately
- Once approved, ask to join any dojo's team
- Or apply as champion to start a new dojo

The screenshot shows the 'Become a mentor or volunteer' page on the CoderDojo Belgium website. The page has a light purple background. At the top, there is a navigation bar with the CoderDojo Belgium logo, links for Home, Events, and Dojos, a language dropdown set to English, a settings icon, and a user profile for Kevin. The main heading is 'Become a mentor or volunteer', followed by a subtext: 'However much time you can give, we can use it — from mentoring most Saturdays to helping out at one big event a year.' Below this is a white form box with three sections. The first section, 'Your details', shows the user is applying as Kevin Dubois (guardian-11@coderdojo-demo.example) and has a phone number field with a placeholder '+32 4xx xx xx xx'. The second section, 'How you'd like to help', contains two dropdown menus: 'Which dojo?' set to 'Not sure yet — any dojo' and 'Role' set to 'Volunteer mentor'. The third section, 'A bit about you', is partially visible at the bottom.

How you'd like to help

Which dojo? Role *

Not sure yet — any dojo Volunteer mentor

A bit about you

Attendance in one click per child

- Mark present or absent at the door, no page reloads
- Each row shows the child's belt and how often they come
- Award belts and badges from the same list
- The session team is recorded too, for the insurance

Champion

Run the whole dojo from one dashboard

- Plan sessions; publishing tells nearby families
- Manage the team, members and youth mentors
- Mail the dojo's families without seeing their addresses
- Connect apps through a secure API

The screenshot displays the 'Dojo Westerlo Champion' dashboard. On the left is a sidebar with a 'Menu' icon at the top. Below it, a 'New event' button is highlighted in orange. The sidebar is divided into three sections: 'OVERVIEW' (containing 'Dashboard'), 'MANAGE' (containing 'Events', 'Team', 'Updates', 'Mail', 'Attendance', and 'Members'), and 'DOJO' (containing 'Settings' and 'API'). At the bottom of the sidebar, the user 'Mila Peeters' is logged in as 'Champion'. The main content area is titled 'New event' and features a 'Menu' icon and a notification bell. It contains two main sections: 'Basics' and 'Location'. The 'Basics' section includes a description, a 'Name' field (filled with 'Coding Saturday'), 'Date', 'Starts', and 'Ends' fields (all with placeholder text), a note about single-day sessions, a 'Places' field (filled with '20'), and a note about the waiting list. The 'Location' section includes a 'Venue' field (filled with 'e.g. "Ghent Public Library"') and a note about using the dojo's own address.

New event

Basics

New sessions start as a draft, hidden from the public site — publish it from the events list once it's ready.

Name *

Coding Saturday

Date * Starts * Ends *

dd/mm/yyyy HH:MM HH:MM

A session always runs within a single day.

Places *

20

How many children can register before new sign-ups go on the waiting list.

Location

Venue

e.g. "Ghent Public Library"

Leave blank to use the dojo's own address.

Vetting volunteers, safely

- One queue: documents to review, checks waiting, expiring
- The document is deleted as soon as they decide
- Only the decision, reviewer and expiry date are kept
- Two-step login, and nobody reviews their own check

CoderDojo Belgium
Organisation

VOLUNTEERS

- Background checks 1
- Applications 3

ORGANISATION

- Django admin

Sofie Claes
Background-check reviewer

Menu

Background checks

Champions and mentors need a valid extract from the criminal record (model 2, Article 596.2) before they can work with children. Open a person to download their document and decide on it: the document is deleted as soon as you do, only the decision is kept.

Find a person by name, email address or username

Search

Awaiting review

Documents that were uploaded, oldest first.

Name	Applied for	Uploaded	Status
Kevin Janssens guardian-3@coderdojo-demo.example	Mentor (pending)	21/09/2026 10:23	Awaiting review

Waiting for a document

Asked for, or rejected and waiting for a new one. The person uploads it from the link in their mail or from their account page.

Name	Applied for	Requested	Status
Pieter Claes	Mentor		

Organisation

Reach the right families, without code

- Build audiences from rules: age, belt, region, engagement
- Campaigns in three languages, with a test mail first
- Journeys, like a “we miss you” mail when a child drops off
- Promotions, sponsors, awards, privacy and people

Families with girls (or gender not listed)

Who's in it

Groups at the top level must all match. Inside a group, choose whether all or any of its rules must match. A "Parents of a child who..." group describes one child: all its rules are about the same child. It only counts children whose parent agreed to their details being used for mail.

Parents of a child who...

match

all of these

Remove group

• Child's gender is one of Girl, Prefer not to say

Remove

Add a rule about...

+ Nested group about the same child

Accounts

+ Add group

22 accounts

Active adults with an email address, before their mail preferences (a campaign only reaches those who want its kind of mail).

Delete

Trust

Built for children's data from day one

Every field classified

GDPR purpose, legal basis and retention for each piece of data; a test fails on anything unclassified.

Export and erase

Families download or delete their data themselves; inactive accounts are erased after two years.

Strong sign-in

Two-step login, passkeys or login links, enforceable per role by the organisation.

Audit log

Who changed what, and who viewed health notes or a check. Read-only.

PART 2

How it was built

Ten days from the first commit to a working platform.

Facts and figures

The platform in numbers

16

days from first commit to today

211

commits

1,157

automated tests

56k

lines of Python

52

data models in 15 apps

192

pages and endpoints

3

languages: English,
Dutch, French

35

mail templates, each in 3
languages

Performance

What the platform handles today

300

people browsing and booking at the same moment: 98% answered straight away, no errors

500

families rushing the same five sessions in two minutes: 83% answered at once, the rest asked to try again

0

server errors or overbooked sessions in these tests

0.1 s

for 95% of pages, measured through the live site

Measured on 8 October 2026 within the real hosting limits: 3 web processes and 32 database connections, fixed by the hosting package. The platform keeps at most 24 of them busy and asks everyone else to wait a moment, so under pressure it gets slower, never unreliable.

Performance

Mail to every family at once

7,145

mails in one campaign to every family, sent by the live platform

120

mails a minute, paced on purpose: booking confirmations always go first

0

mails failed or lost, and no errors along the way

1.4 GB

memory for the whole platform during the campaign, barely more than at rest

Measured on 8 October 2026 on the live hosting, with data the size we expect after a year of growth (100 dojos, 8,300 accounts) and the mail caught in a test mailbox. A longer mailing list only takes longer to send; it doesn't need more memory.

Performance

Ready for five years of growth

43,000

children and 410,000 bookings: five years of the strongest growth we foresee

36 s

for the nightly look at how every child comes to sessions, while mail keeps going out

75%

of the hosting's memory for all background work at its busiest (383 of 512 MB)

1 day

from finding the limit to a fix that is live and tested again

We pushed the live hosting past what it can take, on purpose. At this size the nightly work first got stuck at the hosting's memory limit. It now works in small batches, so its memory stays the same however large the organisation grows.

Timeline

From design system to platform

Date	What landed
18 Sep	The CoderDojo design system: colours, type, components
20–22 Sep	First pages, login and the first data model
23 Sep	Dev environment, background checks, help centre in 3 languages
24 Sep	Data model redesign: accounts, teams, onboarding, belts
25 Sep	Mail engine: consent, queue, bounces, segments, campaigns
26 Sep	Privacy: classification, export, erasure, audit log; the API
27 Sep	Two-step login, sign-in policy, layout and forms
29 Sep	One management area, reviewers' dashboard, documentation
30 Sep–1 Oct	Security headers, health check, load and capacity tests, coding standards
2–3 Oct	Caching, app layers checked in CI, monitoring with Grafana, pathway filters

Approach

Proven technology, a documented way of working

The stack

- Django 6.1 on Python 3.14, MySQL with maps
- Server-rendered pages with htmx, no app to install
- Celery workers send every mail from a queue
- Live notifications over WebSockets

The way of working

- Design system first, every page built on it
- Built with Claude Code as a pair programmer
- Every feature ships with tests and documentation
- Data model, conventions and help centre in the repo

See it live

Try the live demo yourself

A working copy of the platform is live right now. Open it on a phone or a laptop and click through it yourself.

demo.coollestprojects.be

Get involved

Help us test it

Who we're looking for

Testers in every role the platform supports: parents booking a session, volunteers and dojo champions running one, and organisation admins behind the scenes.

Want in?

Email **michael.woidt@gmail.com** with subject "testing cool registration", and tell us which profile fits you.

Curious how it's built? The code is open at github.com/DoublG/coderdojo-event-registration.
